

The Money Advice Service's

2018/19 Business Plan

moneyadviceservice.org.uk

The Money Advice Service changes lives by helping people make the most of their money.

We use evidence to understand who, across the UK, most needs help. We find out what works. We use these insights to improve the ability of people to manage their money, either through partners, or directly.

People face hard choices with money throughout their lives – at moments of crisis such as a divorce, or when they choose products such as a pension or car finance. Confronted with these events, most of us could make smarter decisions, given the right support. Yet 24 million people in the UK do not feel in control of their finances, and more than 8 million are at risk of not being able to service their debts.

We do the things that, if we don't do them, nobody else will. Government has set the Money Advice Service up, and funded us with a levy on financial services, to offer unique and essential help with money – whether that's best delivered directly by us, or through others.

We are in a fortunate and unique position, because we never sell anything to anyone. So we offer a comprehensive website with fast, free, independent help on everything from pensions to buying a home. We offer a call centre with highly trained staff who can tell people where to get the right help at the right time on any financial topic.

We know we can't help everyone on our own. This is why we have established a 10-year plan to focus the activities of everyone working on the problem. We fund charities to offer half a million people access to expert debt advice. We also work with financial services, government, and other sectors, collaborating with about 200 partners, seeking and sponsoring innovative ways to help people to save more and plan better for their future. We carry out tests and trials so that we can build evidence of what works and share it with others. We aim to empower every organisation offering money support to be as effective as it can be. This includes organisations working to build the money skills children and young people need for a successful adult life.

In 2018/19 we will help nearly 11 million people with their money and debts, and we will work to energise hundreds of other organisations around our long-term vision of how everyone in the UK can better manage their money.

Because we believe that when you control your money rather than the other way round, life is easier, happier and more productive.

Chairman's foreword

I believe that 2018/19 will be the most successful year the Money Advice Service has ever had. And a marker of that success is the fact that it will almost certainly be the last year of the Money Advice Service's existence.

That may seem a paradoxical statement for a Chairman to make; but it's firmly in line with the philosophy I have promoted since I took on my role in 2013. I have always believed that people's money problems do not exist in neat silos. They are inter-linked throughout their lives, and across different aspects of their lives at any one time. I have also always believed that no single guidance organisation on its own can successfully address the scale of the money management challenges people face. At the Money Advice Service we believe success is achieved through a broad and deep coalition of interested organisations, aligning their activities with an anchor organisation that is able to provide funding, leadership and insight.

When the Government consulted on the financial guidance landscape in 2015, the Money Advice Service responded with our view that a single financial guidance body, which embraced pensions alongside all the other money challenges, would be best for the consumer and better value for levy-payers. So the passage through Parliament of the Financial Guidance and Claims Bill, which will set up the single financial guidance body (SFGB), is a great result for anyone who cares passionately about helping consumers manage their money better.

It will result in a strong and deep join between three of the key services that exist to support people as they manage money, debt and pensions. It places a body with depth and breadth at the heart of the national debate about financial capability. And through the provisions of the Bill, we anticipate that the responsibility to lead and co-ordinate a national financial capability strategy will be set into law, at the heart of the new organisation's mission.

The most significant change in the work of the Money Advice Service during my period as Chairman has been the formulation of a Financial Capability Strategy for the UK. This has led to the development of a diverse, committed and powerful coalition of organisations that address people's everyday needs for money, financial products, financial guidance and financial advice. In the process, the Money Advice Service has changed from an organisation with a very close focus on the delivery channels it used and the other delivery work it funded, to one that is just as interested in supporting effective, evidence-based delivery by literally hundreds of other organisations across the UK.

The leaders of the SFGB – a body that will come into existence during the year – will of course make their own decisions about how to use and configure the work the Money Advice Service has done. Nothing we do in our last year of existence should be seen as binding the new body in any way. But I am confident that the strategies, partnerships and relationships that are thriving through our Financial Capability Strategy work will provide it with options and momentum if it chooses to take them up.

Meanwhile, as we head towards the foundation of that body in the last year of our existence, we have a vibrant programme of work to complete in fulfilment of the third and final year of our Corporate Strategy. We will provide valuable services to nearly 11 million consumers whose need has never been greater, we will prime our partners for co-ordinated action, and we will set out important service delivery proposals, based on evidence, for the new body to consider.

And so building momentum is the theme of this plan:

- momentum in taking the evidence from our 63 What Works Funds projects and making sure the most impactful techniques are understood and used by financial capability practitioners everywhere in the UK
- momentum in taking forward the conclusions from our strategic review of debt advice, and Peter Wyman's Independent Review of Debt Advice Funding, to truly strengthen the work of debt advice delivery organisations as they focus on quality, customer journeys and outcomes

- momentum in taking our newly gained knowledge about areas where people feel they need guidance or advice and do not believe they can access it, and using that to focus our digital and telephone channels, and mobilise other guidance organisations to support consumers seeking help in these areas
- momentum in crystallising the reflective thinking, evidence gathering and goodwill of partner organisations in two important commissioning plans: one to address the money needs of working age people, and one to take a strategic approach to children and young people's financial capability at school and at home.

All our plans have been enhanced by evidence, insight and constructive challenge from stakeholders. So I thank everybody who has read and responded to our consultation on this plan.

Andy Briscoe
Chairman of the Money Advice Service

Chief Executive's introduction

When I joined the Money Advice Service last year I was immediately struck by the depth of knowledge and conviction I encountered in the staff I met.

I am continuously impressed by the range and quality of insight, the depth of expertise and passion that informs everyday working at the Money Advice Service (MAS). As we have worked on this plan together I have seen this woven in to projects and activities which have, as a result, become clear priorities for 2018/19.

Since I joined MAS I have spent considerable time speaking to my team, to our stakeholders, listening to the needs of our customers and I have read the responses to our draft business plan consultation. Overwhelmingly these views lead me to the conclusion that the direction of travel we set out on in our three-year strategy in 2016/17, is the right one.

As a result, this business plan – which is likely to be our last – sees MAS complete this three-year strategy. It focuses on:

- building on the momentum behind our financial capability work and helping nearly 11 million people with financial guidance;
- increasing the provision of high-quality, free-to-client debt advice;
- with the debt sector, working through and driving forward the recommendations from Peter Wyman's independent review of debt advice funding;
- delivering changes to how we commission free debt advice, based on our strategic approach to commissioning;
- using the experience of our 63 What Works Projects, the evidence assembled on our Evidence Hub, and the insight from our Financial Capability Lab, to ensure interventions that are funded and delivered really improve the money management skills of people across the UK;
- understanding effective ways of encouraging people to save via the workplace and how fintech can improve the money management behaviours of those who need it most; and
- developing plans to commission and fund interventions to build the financial capability of working adults and of children and young people.

Of course everything we do in 2018/19 will be set against the backdrop of the creation of the single financial guidance body (SFGB).

In MAS we are excited about the prospect of the SFGB coming into existence. For us this underlines the direction of our travel, focused on: a strategic approach to financial capability and debt advice; the need to increase the supply of quality debt advice as set out in the Wyman review; evidence-based decision-making; segmentation; the prioritisation of our customer base; and partnership working.

We anticipate that during the course of the year that this plan covers, MAS employees will transfer into the new organisation alongside colleagues from TPAS and Pension Wise. I do not underestimate the challenge we have set ourselves in delivering a full year's business plan against the backdrop of that simple fact, but that is what we intend to do.

I believe that to do this we must recognise the importance of every single person in the MAS team and their role in successfully delivering this plan.

May I also thank those of you who have shared your views on our draft business plan. Armed with those views and the strong support that we have had, I am confident we can maintain the momentum we have generated so far into the newly established single financial guidance body.

Charles Counsell OBE
Chief Executive, Money Advice Service

Executive summary

Start, stop, continue: strategic choices for the Money Advice Service in 2018/19

- During 2018/19, a single financial guidance body (SFGB) will come into existence. The functions and objectives of the new body have been proposed in a draft bill. These will be subject to change as Parliament debates them. Reviewing the drivers behind the third and final year of our Corporate Strategy, we believe that with some small exceptions continuing the delivery we already planned is likely to fit well with the anticipated statutory role of the SFGB.
- A further priority for 2018/19 is to work closely with the SFGB programme to enable the setup of the new body.

Chapter 1: delivering through others

- During 2018/19, we will aim to complete the mobilisation and capacity-building phase of our 'collective impact' approach to the Financial Capability Strategy for the UK (UK Strategy). This means finishing the 63 What Works Fund and related projects, and widely communicating the evidence they will create. It also means readying all our evidence tools for a wide range of partners to use. We will also work to support the consistent practice and professional standing of financial capability practitioners. Finally, we will refresh the UK Strategy during the course of the year to reflect the latest insight, evidence, and plans from partners.

Chapter 2: earlier and wider access to debt advice

- As recommended by the Independent Review of Debt Advice Funding, we will increase focus on our strategic co-ordination of the debt advice sector in delivering the Debt Advice Sector Strategy. This will include enhancing debt advice customer journeys, improving creditor practices; and delivering and influencing take-up of the recommendations from the Wyman Review.
- In our continuing direct delivery we will increase funding to improve quality, and commission sessions to help up to an additional 90,000 people access debt advice.
- In our strategic commissioning work, we will develop regional commissioning plans for London and the North-West, which will incorporate the six principles of our new Debt Advice Commissioning Strategy.

Chapter 3: more people budgeting and saving

- We will build the evidence base to develop a commissioning plan targeted at working-age adults and families between the ages of 18 and 54; influence and work with others to meet the needs of adults of all ages (focusing on the workplace and the Pensions Dashboard as channels of engagement, and developing financial 'rules of thumb' for key life events); and will use our direct channels to support many of our 10.8m customers, primarily with guidance on Universal Credit, Help to Save and retirement-income decisions.

Chapter 4: better access to guidance and advice

- We will improve access by developing our online tools, including applying the results of the evaluation of our budget planner. We will work with other providers to help them focus their services on the audiences and life events where people in the 'financially struggling' and 'financially squeezed' know they need help, but don't access it (our research shows there are about 2m such people).

Chapter 5: widening and improving financial education

- We will build the evidence base, including through our What Works Fund; develop a commissioning plan focused on the needs of children and young people at home, in schools and in the community; and influence funders, providers and practitioners, such as teachers and local authorities, to deliver good financial education.

Chapter 6: measuring our impact

- We will set baselines and the amount of change we believe can be achieved against six long-term impact measures and, for our work in 2018/19, we set out 15 commitments and measures of efficiency and effectiveness.

Chapter 7: budget and resources

- We are proposing a money guidance budget of £27.2m (including £0.2m for transition) and a debt advice budget of £56.3m (including £0.3m for transition).

Highlights of our work during 2017/18

We helped children and young people to manage their money better

12,000 pupils

in 130 English schools will be taught maths in a real-life context to improve both maths and money management skills, as part of our **Maths in Context** randomised control trial.

Twelve of the **What Works Fund projects** have been focused on children and young people, and 14 on young adults.

More than £1m is going into What Works Fund projects working with children and young people.

We funded the **Financial Education Quality Mark** through Young Money, to ensure more than 30 quality-assured resources are readily available to teachers and others.

We completed the six-month evaluation of the **Talk, Learn, Do** parenting pilot, in which 163 sessions were delivered to parents across 14 local authorities in Wales.

We began a research project looking at **secondary schools in England**, to understand more about good practice and barriers to delivering financial education.

We developed a **Youth Practice Outcomes Framework** to help those who support young people and young adults outside school settings, to measure the effectiveness of financial education and guidance they provide.

We helped many organisations to deliver improved financial capability

100 organisations

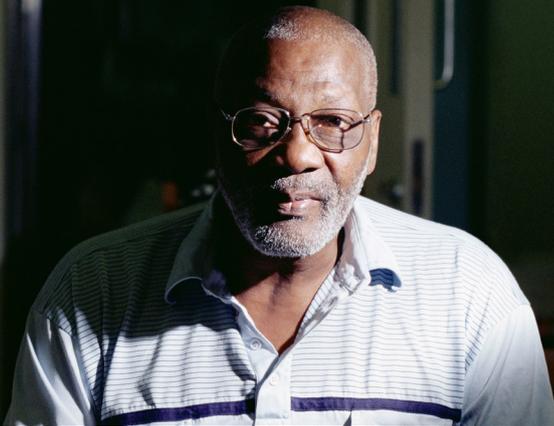

have now signed up to the financial capability **IMPACT** principles, which show their commitment to building and sharing evidence for the benefit of all.

We ran the second annual **Financial Capability Week**, with nearly 200 events across the country, and more than 200 people attending a vibrant conference in London.

We advanced 63 projects in the **What Works Fund** to measure the financial capability work they do – through £7m of funding, specialist help to build their evaluation capabilities, and a team of five supporting them every step of the way.

The **Financial Capability Lab** was supported by 100 industry experts to generate 250 ideas across three challenge questions. Then, in partnership with the Behavioural Insights Team and Ipsos MORI, we tested 18 new ways to help people in the 'financially squeezed' segment.

We supported a **Fintech for All** competition that gave prizes to the top two out of 85 entrants, and are working with the two winners to evaluate the impact of their apps on the people they serve.

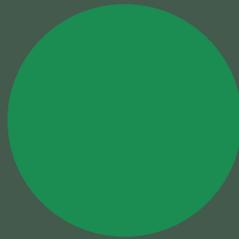

We helped nearly half a million adults to address their debts

In the year before our corporate strategy began, we funded debt advice for

380,000 people.

At the end of 2017/18 we expect the number of people supported by our funded debt projects to be nearly

500,000.

We consulted on and published a **Debt Advice Commissioning Strategy** that will set the template for how we co-design services with users all over England as we renew funding agreements over the next five years.

We provided a secretariat to **Peter Wyman CBE**, (a senior leader with experience in public, private and voluntary sectors, appointed to take an independent view of the funding of debt advice). This enabled him to produce a landmark report just six months after starting his work.

We worked with an expert economic consultancy to estimate that the total **social benefit of debt advice** (positive impacts on mental health, employment productivity, creditor recovery rates) is £300–£570m annually across the UK.

We saw the **Standard Financial Statement**, which makes it easier for debt advisers to treat clients consistently and advocate on their behalf with creditors, adopted by 1,000 organisations.

We gave impartial money guidance to millions of adults

We provided impartial money guidance to **more than 10m people** through our direct digital and telephone services.

Customer satisfaction for our direct services reached 85%.

We helped **Citizens Advice** to improve the search engine optimisation on their widely-used national website.

Nearly 400,000 customer contacts per month accessed our **budgeting and saving** topics.

We **evaluated the budgeting tool** on our website using the same processes and standards we set for external evaluations.

We set up **webchat provided by The Pensions Advisory Service** to launch automatically from the pensions pages on our website.

Our content and tools were syndicated by **more than 100 partners**.

Start, stop, continue: strategic choices for the Money Advice Service in 2018/19

In 2015 the Money Advice Service set out its view of the financial guidance landscape and the gaps it intended to fill over the course of a three-year Corporate Strategy, beginning in April 2016.

2018/19 is both the last year of that Corporate Strategy period and the last year of the Money Advice Service, which, subject to the will of Parliament, will be replaced by a single financial guidance body (SFGB) at some point during the course of the year.

This is therefore an opportune moment to consider what we should start, stop or continue from the MAS Corporate Strategy given what we know about the new body.¹

The focus of the single financial guidance body

The [Bill as published on 6 February 2018](#) contains further details and provisions other than those summarised below.

All of the below is subject to parliamentary debate and may change.

SFGB – current draft of objectives:

- (a) to improve the ability of members of the public to make informed financial decisions;
- (b) to support the provision of information, guidance and advice in areas where it is lacking;
- (c) to secure that information, guidance and advice is provided to members of the public in the clearest and most cost-effective way (including having regard to information provided by other organisations);
- (d) to ensure that information, guidance and advice is available to those most in need of it (and to allocate its resources accordingly), bearing in mind in particular the needs of people in vulnerable circumstances; and
- (e) to work closely with the devolved authorities as regards the provision of information, guidance and advice to members of the public in Scotland, Wales and Northern Ireland.

SFGB – current draft of functions:

- (a) the pensions guidance function;
- (b) the debt advice function;
- (c) the money guidance function;
- (d) the consumer protection function; and
- (e) the strategic function.

If the provisions of the Bill become law, the SFGB will take forward much of the work of the three underlying organisations (MAS, The Pensions Advisory Service, Pension Wise) but will also have some additional areas of focus, while the funding of debt advice in the devolved nations will pass to the devolved governments.

So this chapter makes no claim that everything MAS is already doing fulfils all the duties set out in the Bill.

And of course, in 2018/19, MAS will work only within its statutory remit.

¹ At the time of publishing this draft plan, the Bill setting out the legal basis and statutory remit for the SFGB is still being debated in Parliament, so we cannot make any certain comments about its remit. The rest of this chapter is drafted using the assumption that the key provisions of the Bill will indeed become law, nonetheless with the clear understanding that Parliament may choose to alter them.

The five aims of our Corporate Strategy

In the rest of this chapter we have reviewed the starting points in the five aims of our Corporate Strategy, what we see those delivering in 2018/19, and we look at their fit against the likely objectives and functions of the new body as they are currently drafted in the Bill.

Aim 1: delivering through others

The first conclusion of our Corporate Strategy was that the most valuable thing we could possibly do with our money is to help everyone else working on the problem of financial capability to achieve greater impact.

We recognised that there was a gap in co-ordination, because many excellent organisations were carrying out overlapping activities. There was an urgent need to document and agree priorities, because without agreement on how to describe the nation's money management challenges there could be no steps towards commonly agreed solutions. We saw a lack of evidence about what was effective in improving money management, and even a lack of common tools that could make measurements comparable and build a common knowledge base.

We responded by establishing the Financial Capability Strategy for the UK (UK Strategy), as well as similar strategies in Scotland and Wales,² that deliberately goes further than MAS could possibly go alone.³ We established a Financial Capability Board, and work with devolved governments and devolved steering groups, to involve leaders that represent a wider range of organisations and perspectives, and have a wider set of responsibilities, than the Money Advice Service board on its own.

In doing this we subscribed to the theory of 'collective impact', which is an approach to getting organisations to tackle complex social problems together. This theory proposes that collective impact needs a 'backbone' organisation (which has both the remit and the funding to support others interested in working on the same problem), surrounded by a constellation of other partners. The theory breaks the long-term change needed into three main phases:

- a **mobilisation** phase, in which common goals, common measurement tools, continuous communication and mutually reinforcing activities create capacity across the constellation of people and organisations who all have a motive to work on the change;
- an **intermediate outcomes** phase, in which the changed behaviour of individual leaders, and the changed behaviour of organisations, begin to affect policy, delivery and activity; and

- an **impact** phase, in which the intermediate outcomes gather scale and momentum – to affect the lives of very large numbers of people who come into contact with the organisations and people that have committed to the strategy.

In the first two years of our Corporate Strategy we set out to tackle the mobilisation phase, and make MAS into a supportive, flexible and respected backbone organisation.

What we have found as we have done this is that the phases are not successive, but overlapping. We have had some significant successes in creating common measurement tools, mutually reinforcing activities and continuous communication. We now have a common agenda for the partners in the Financial Capability Strategy – but we are still debating the measurable goals. We have seen policy, delivery and activity affected by what we have started, but we cannot yet say they are on a scale large enough to affect many consumers.

We regularly compare practices and evidence with other countries that are taking a strategic approach to money management skills, and we find similar solutions and similar challenges. Like the UK, many countries are measuring the effectiveness of individual initiatives but cannot describe a clear causal path from those to population-level measurements of change.

By the third year of our Corporate Strategy, we expected to be in the foothills of what will be a long trek in delivering on the aims of the Financial Capability Strategy for the UK. The logic of that third and final year of our Corporate Strategy for delivering through others, is to:

- refine and complete the set of tools and techniques that partner organisations are using to evaluate their activity and share evidence of what works, why, when and for whom;
- complete the first phase of our ambitious What Works programme, funding 63 projects to completion, and initiating a new round of What Works projects that aim to fill some of the gaps in evidence not covered by the first round;

2 In Northern Ireland, a strategy already existed which we aim to support through all our activities there.

3 Our Corporate Strategy is therefore focused on those elements, within the wider Financial Capability Strategy for the UK, which the Money Advice Service sees as gaps it is uniquely well-placed (or required) to fill. Our 'five aims' are therefore our work to fill these gaps.

11.6m UK consumers in the UK match the 'financially struggling' segment. We identified this overall segment as having high needs for debt advice and money guidance.

- continue our work to populate the Financial Capability Evidence Hub, pulling together evidence and insight from the UK and beyond (including from our What Works programme) and sharing that evidence with the rest of the sector; and
- begin an evaluation that will seek to understand the effectiveness and impact of the Financial Capability Strategy for the UK. This will include the identification of a set of measures to indicate, at a population level, what difference that UK Strategy is making. It will also include the development and articulation of a causal pathway that links the work of the Strategy to the changes observed in the UK population.

We also believe the time is right to refresh the UK Strategy document itself, and take stock of the Northern Ireland, Scotland and Wales strategies at the same time. We have learned a great deal since the first version was written, not least about how to simplify the language and crystallise the priority issues. A short document will set out plans for the next phase, including how we see major partners being involved in delivery.

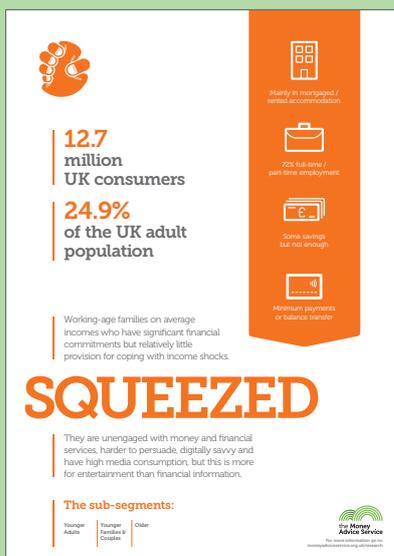

Given that the Bill introducing the SFGB currently gives it a statutory remit 'to develop and co-ordinate a national strategy to improve the financial capability of members of the public, the ability of members of the public to manage debt, and the provision of financial education to children and young people', we see these proposed activities in our first aim as highly relevant to the new body.

Aim 2: earlier and wider access to debt advice

Our Corporate Strategy gave a high priority to our statutory remit to improve the availability, quality and consistency of debt advice, and to strategically co-ordinate the debt advice sector. This was our second corporate aim.

In the year before our Corporate Strategy began, we funded debt advice for 380,000 people. At the end of 2017/18, we expect the number of people supported by our funded projects to be closer to 500,000. And the proportion of people taking action to address their debts remains constant – nine out of every ten people who receive MAS-funded debt advice do so. Although face-to-face debt advice remains an important component of our delivery, at around half of all people helped, telephone and online channels offer significantly more debt advice in both volume and percentage terms than when we began our Corporate Strategy.

But even now, the gap between people's demand for debt advice and the supply of free debt advice from all providers across the country runs to more than half a million people per year. So there is much more to do.

12.7m consumers in the UK match the 'financially squeezed' segment. We identified this overall segment as having high needs for money guidance, especially support with saving, managing credit, and planning ahead for their long-term finances.

We also believe that over the next 12 months we need to put a new focus on quality and consistency. The evidence of consistent and high-quality advice provision is mixed. There are examples of genuine excellence. Client satisfaction with the debt advice they receive, and their propensity to take action to address their debts, have both remained at the same high level (while the volume has grown by nearly one-third). These are two very important indicators of quality.

But we have also introduced expert reviews of the quality of the debt advice sessions we fund, to complement the client's subjective perceptions. These build on the thinking about quality set out in the FCA's regulatory framework for debt advice. What we have seen and been told by our partners in the sector has given us cause to home in on the following themes:

- Do clients always get the best advice for their unique individual circumstances?
- How often do debt advisers focus on the long-term needs of clients, and how often do they only focus on the here-and-now?
- How consistently and well are records kept, so that third parties can be sure the debt advice given was right for the client?

We are still gathering data to help us reach the most informed answers to these questions. We believe that the majority of debt advice we fund is of good quality and delivers effective outcomes. But we also think that we need to work with delivery

organisations to deliver more effective audit and continuous improvement mechanisms in parallel with increases in volume. In 2018/19 we plan to put in place a new performance management framework that will be part of our measurement mechanisms for debt commissioning in 2018/19.

Peter Wyman published his Independent Review of Debt Advice Funding in January 2018. We see much of this work as the blueprint for the future shape of the debt advice sector and intend to influence take-up of the review's recommendations during 2018/19, as well as delivering a number of them ourselves.

During 2017/18 we have consulted on our strategic principles for commissioning debt advice. The final Debt Advice Commissioning Strategy, published in December 2017, expands on the themes above. Over time we expect to migrate to commissioning based on these themes. As with everything we do in MAS, we must test and build the evidence base that shows whether the new approaches work, before commissioning them at scale. We will do this in 2018/19 and this will give an evidence base for future commissioning of debt.

We anticipate that the SFGB will have a remit to fund debt advice delivery in England and to set standards for those delivering that advice. The work we are doing under this aim is therefore likely to be relevant to the SFGB. And as we prepare debt advice services to be transitioned to their separate funding and governance arrangements in Northern Ireland, Scotland and Wales we aim to provide tools and processes that we will share with the devolved authorities to drive up the quality of debt advice.

24.5m consumers in the UK match the 'financially cushioned' segment. Some of them need support with debt advice; young adults in this segment will benefit from money guidance; and our digital service serves millions of people in this segment.

Aim 3: More people budgeting and saving

When we analysed the money management needs of the UK population, we identified that two segments of the population in particular, the 'financially struggling' and 'financially squeezed' segments (totalling around 24 million people) should be a particular focus of our work.

We thought that the most important thing we could encourage people in these segments to do was to build a savings habit and a savings buffer, so that if they experienced a sudden financial shock they would have more to protect themselves from over-indebtedness.

We believed funding other organisations to help these people would be at least as important as any direct delivery we could do, if not more so. This is because we want to encourage these people to engage with money management before it becomes a problem. Finding touchpoints in organisations that are relevant to them in communities and other local settings seemed the best way to get that engagement.

This was particularly so for people in the 'financially squeezed' segment, as they are people of working age, often with families, and they are much less engaged with money management than people in the other segments.

So our strategy was to fund a wide variety of projects through the What Works Fund, to discover which organisations can work with people in these segments, and what is effective

in doing so. We then committed to publishing a commissioning plan in autumn 2018 that would set out what we do to help people in these segments budget and save through direct delivery, what we would commission through others, and what we would call on others to do without direct funding but through a co-ordinated approach.

Most voluntary and public sector organisations that bid into the What Works Fund deal directly with the 'financially struggling'. This meant that of the 63 projects in the What Works Fund, however, only a small number of the 40 addressing working-age people would reach the 'financially squeezed' segment. So we set up a Financial Capability Lab, as another branch of the What Works Fund, to spur the development of 18 interventions that could help people in the 'financially squeezed' segment. This has been a success, with about six different approaches that we want to pilot or take forward with partners.

In the third year of our Corporate Strategy, we plan to publish the commissioning plan focused on the needs of working-age people. We believe this is likely to be valuable to the SFGB. It will set out for consultation our view of the best mix between what we should fund, what other funders will do, and it will draw together conclusions from all our What Works Fund activities, and wider evidence gathering.

Working for and with the Devolved Nations

For many years MAS has worked closely with each devolved nation, through respective governments, departmental representatives and a wide range of agencies and other stakeholders in each country. A MAS Country Manager is located in each nation, representing that nation both internally and externally in each country in the application of their expertise in helping people to better manage their money, including financial capability and relevant insight and analysis.

This model, which has led to strong links between our strategies, business plans and activity and that of each devolved administration, has worked to good effect and we will continue it during 2018/19.

Allison Barnes
Scotland Manager

Lee Phillips
Wales Manager

Aim 4: More people accessing guidance and advice

At the outset of our three-year strategy we closed our face-to-face provision, but retained a more focused online and telephone service. Telephone calls are up by around 10% since we began our Corporate Strategy period and digital contacts by around 15%. It is interesting to reflect that now we spend nothing on advertising and yet our reach is wider than ever – we expect that our website will have 28.5 million visits in this financial year. Instead of marketing, we have focused on developing sophisticated search engine optimisation techniques using skilled experts. This means that whatever guidance a consumer is seeking MAS will be at or near the top of any search engine results page. This is made possible by having highly relevant and engaging content and being a trusted source that other credible organisations – news sites, financial service organisations etc – will link to.

At the same time, we set in train three strategically important pieces of work to help focus our guidance work.

- One was to understand who was not accessing guidance and advice, in what circumstances, and for what reasons.
- The second was to work with other voluntary sector guidance providers, where we believe them to be better placed to reach and help certain groups of consumers than our own services.

- The third was to begin the robust evaluation of our own online tools, applying the principles and tools that we have developed for use across the sector to understand what impact these tools have on customers' financial capability. We have begun with an evaluation of our Budget Planner and will publish the results on the Evidence Hub in Spring 2018.

The guidance and advice survey showed that there is a significant gap between the financial help people want and need, and the help they actually get. But more importantly, it gave us deep insight into the reasons why. Lack of awareness and trust in what is available are key barriers, with just 59% of the 'financially struggling' or 'financially squeezed' accessing guidance or advice on topics that are of interest to them. These insights give us an ongoing programme of work to improve our own services, and crucially areas of focus to work with other organisations, so together we can help more people in the right place and at the right time.

We believe that carrying forward work with other guidance providers is likely to be relevant to the SFGB's remit to enable consumers to access information, guidance and advice. With regard to the workstream focused on improving our own services, we think there is a case for making inexpensive improvements, but we are conscious that the leadership of the SFGB will have decisions to make about its consumer offer. We will not therefore invest in any fundamental changes to our websites in 2018/19, except to improve access to evidence and insight.

Aim 5: widening and improving financial education

The final aim of our Corporate Strategy was to co-ordinate, strengthen and improve all the ways in which children and young people might be helped to think about money, experience it, and prepare for managing it in adult life.

We committed to publishing a commissioning plan setting out our stall in autumn 2018. Just as with the commissioning plan for working-age people under aim 3, we would expect the plan to draw conclusions from our investigations into evidence of what works, and set out the balance that we think should be struck between delivery through our direct channels, commissioning others to deliver, and co-ordinating others to do valuable work without direct funding from ourselves.

We have made great progress, and yet there is still much further to go. Research we published in 2017 showed us that adult financial behaviour can be predicted by childhood skills from as young as the age of 5, but most resources still go into lessons or interventions for much higher ages.

Our What Works Fund has funded a number of pilots testing innovative ways to make financial education in schools and a range of other community settings more lively, experiential and timely, including vital new work in primary schools directly influenced by our research showing the importance of starting young.

Our 'Maths in Context' randomised control trial (RCT) is rigorously testing the hypothesis that if more of maths is taught through money, both money skills and maths skills will be improved more than by teaching either subject on its own.

Through our funding of the 'Talk, Learn, Do' parenting pilot we feel we have successfully moved the debate so that many are thinking just as much about money conversations and interventions in the home as well as what happens in schools.

From our research we have begun to understand in much more detail which children and young people are particularly vulnerable in a financial capability context, and to work with local authorities to test how financial education can be embedded in support tailored to their unique needs happening in communities, as well as school and home.

But we recognise that this is a complex landscape with many moving parts – not least in the education systems that are different and devolved in Northern Ireland, Scotland and Wales.

A way to truly mobilise high-quality financial education in schools across the UK is to win the hearts and minds of large numbers of teachers directly, as well as advocating the curriculum requirements that are communicated by educational policy-makers and regulators.

We therefore plan in 2018/19 to design a long-term strategy for communication with teachers about evidence of what works and why it has a value, including working with others in the sector who are already making the case to schools.

We will also build on our initial work in local authorities. This will scale up and embed an offer that supports those who are already working with particularly vulnerable children and young people in communities and homes. Where they begin to deliver financial capability support as part of their routine work, it will create a key route for influence and change for those whose needs are not met through universal school education.

We anticipate that the SFGB is likely to have a statutory remit to co-ordinate the provision of financial education to children and young people. So we expect our children and young people commissioning plan to be a relevant contribution for the SFGB to consider.

We believe that with some minor exceptions, continuing to deliver on our five strategic aims, in line with our Corporate Strategy, will deliver value to what we understand will fall within the SFGB's statutory remit. We therefore set out plans on the following pages that aim to keep up the momentum on establishing evidence, mobilising others, and ensuring consumers access high-quality guidance and debt advice no matter who delivers it.

Chapter 1: Delivering through others

The strategic aim

Aim 1: to lead co-ordination of the many organisations that can contribute to improving financial capability through collective impact – creating a common understanding of problems and of ways to address them.

What is the Financial Capability Strategy for the UK?

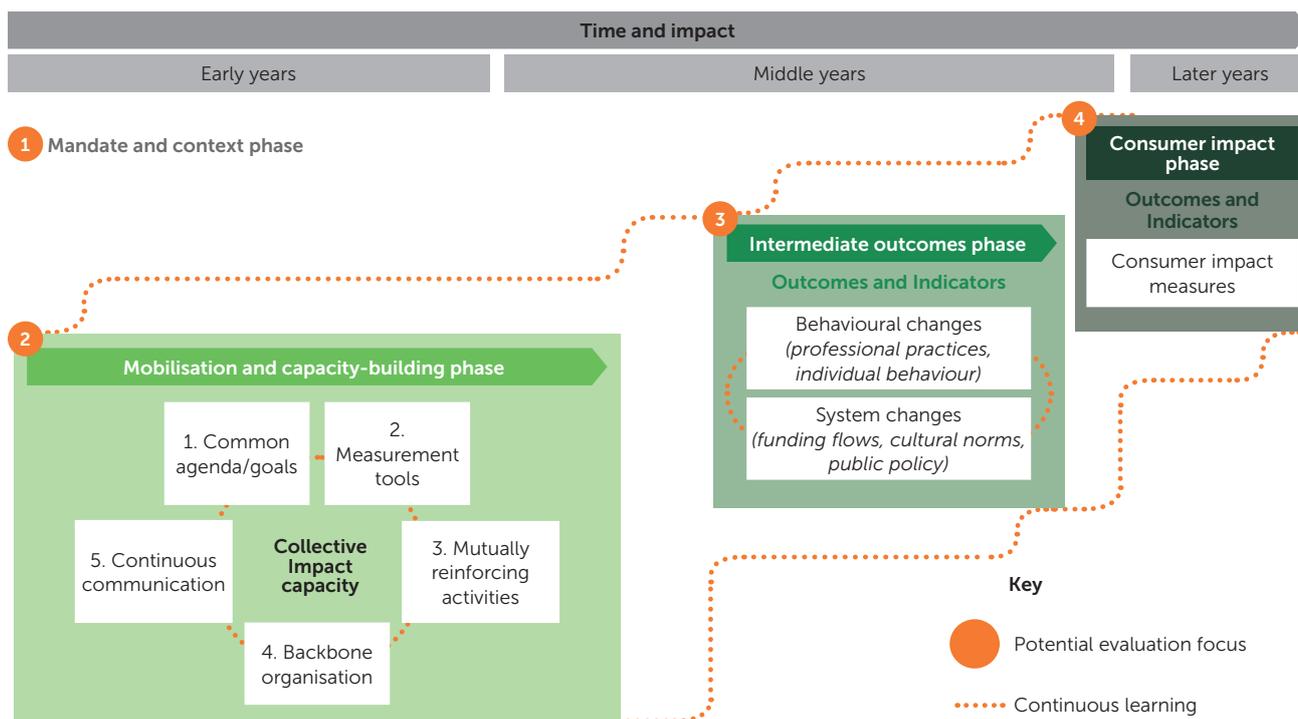

Levels of financial capability in the UK are far too low:

- Four out of ten adults in the UK feel their approach to budgeting does not work well.
- Around 17.5 million working-age people have less than £500 in savings, and so are highly exposed to a drop in income or unexpected bills such as a boiler repair or a new fridge.
- More than 8 million people in the UK are over-indebted.

These are complex problems which can lead to widespread impacts on individual wellbeing, health and the UK economy. They cannot be solved by any one organisation working alone. The Financial Capability Strategy for the UK was launched in October 2015 to bring many different people and organisations together to collaborate and take action to permanently address these issues. Employers, charities, government and businesses all want to give people the lifelong control and confidence to make the most of their money – from pocket money to home-buying.

So the **Financial Capability Strategy** is a national partnership, led by an expert board, addressing a UK-wide problem – with parallel and supporting strategies in **Northern Ireland, Scotland** and **Wales**.

The panel above sets out in brief the essentials of the Financial Capability Strategy for the UK (UK Strategy). In this chapter we set out the progress we want to make towards that vision in 2018/19.

From the [Guide to Evaluating Collective Impact](#) and used under a [Creative Commons](#) Licence / Language for phases 1 and 2 modified

Our approach follows the theory of ‘collective impact’, which hinges on the idea that in order for organisations to create lasting solutions to social problems on a large-scale, they need to co-ordinate their efforts and work together around a clearly defined goal. The four phases that an organisation leading collective impact can follow are set out in the diagram above. Once context and a mandate have been established, the second phase of work focuses on mobilisation and capacity-building. That means getting other organisations to reach a common understanding, agreement on priorities for action, and find ways of working together. We see our work in 2018/19 principally as finishing the mobilisation phase, but the phases overlap, and there are elements of the next phase (intermediate outcomes) that we expect to see developing in 2018/19 as well.

The key elements of the mobilisation phase are:

- establishing a common agenda and goals;
- creating measurement tools;
- performing mutually reinforcing activities;
- continuous communication;
- a backbone organisation.

Deepening the common agenda and goals

The original version of the Financial Capability Strategy for the UK (published in October 2015) established a common agenda but did not set specific goals, nor specifically how they would be measured. In 2018/19 we will update it and address these challenges.

In 2018/19, we plan to work with financial capability partners to establish the long-term impact measures that would indicate, at a population level, whether the UK Strategy is making a difference.

Our thinking about our part in these goals is given on pages 47 and 49.

We also intend to work with our financial capability partners to set out a short, refreshed and simplified version of the UK Strategy that will establish how we expect to reach the goals identified and what different partners have agreed to do.

Finally, we have begun, and will continue in 2018/19, to evaluate formally the UK Strategy itself. We will look at the experience of organisations involved in delivering the UK Strategy, the effectiveness of governance and communication mechanisms (see improving continuous communication, page 25 below), and ultimately the impact of the UK Strategy on the financial capability of people in the UK.

Concluding work on measurement tools

We have created an Evaluation Toolkit, with a suite of Outcomes Frameworks that set out standardised ways of measuring people's money management skills and motivations. The Toolkit sets out a broad, easy-to-follow approach to evaluating financial capability activity, and the frameworks provide a bank of carefully researched questions that can be used in surveys to measure changes in people's financial capability outcomes.

Many organisations have adopted the Toolkit, and notably all 63 projects in the What Works Fund use the frameworks to capture outcomes in a way that will allow meaningful comparisons across findings.

We are constantly evolving our Outcomes Frameworks so that they reflect the latest financial capability insight and analysis. This year we have adapted the Adults Framework so that it incorporates our research to define the building blocks of financial capability, and we will apply that work across the rest of the frameworks next year. We will also be adding two new frameworks focusing on young adults and older people in retirement, and a brand new analysis tool to help organisations make sense of the data they collect through the frameworks.

Continuing mutually reinforcing activities

We have a suite of core, mutually reinforcing activities that in 2018/19 will continue to support financial capability partners in developing a common view of both problems and solutions.

Five are particularly important.

- Our programme of work around the [IMPACT principles](#) encourages and supports organisations who want to commit to an evidence-based approach to financial capability. They agree to share results for the benefit of all, and we agree to support them. Already, 100 organisations have signed up to the IMPACT principles and we expect many more to follow.
- In the final quarter of 2017/18 we are working with a cohort of ten funders to help them understand the latest insight and evaluation evidence on financial capability, and to help us understand how we might best work with funders in future. We will then bring a broader network of funders together for an event aiming to inform and support their funding decisions to achieve greater collective impact on financial capability.
- During 2018/19 we will carry out a new survey assessing the financial capability of a large sample of adults all across the UK. This provides

a resource base for all stakeholders and will enable us to advance our learning about the core building blocks of financial capability.

- Partners' commitments to share evidence would have limited value if the evidence were widely scattered and hard to find and compare. So the second key activity at the core of this work is based around our [Evidence Hub](#). At its heart, this is a repository of the best financial capability evidence and insight from all around the world. It allows readers to sift and search for the most relevant studies, and pulls together key learning in topic-based thematic reviews. It currently contains almost 220 evidence summaries and three thematic reviews and will grow significantly in 2018/19, not least as we add material from the 63 What Works Fund projects. We are also pleased to announce an exciting new partnership with the University of Birmingham, University of Edinburgh, Ecorys and Toynbee Hall who will help us to grow the Hub, ensure it maintains high standards of academic quality, and support us in sharing evidence with our stakeholders.
- The [What Works Fund](#) is the other flagship among the mutually reinforcing activities that we expect to focus on in 2018/19. We have funded more than £7m of projects that look at financial capability interventions all across the UK, to almost all age groups, and using a wide variety of settings and channels. A few of these projects will deliver their evidence in January, February and March 2018 but many will deliver between April and August.

For each completed What Works project, we will:

- support the grant recipient to place a high-quality report on their findings on the Evidence Hub;
- support the grant recipient with their own learning and sharing plan to share the evidence among their own networks;
- draw the evidence into a range of larger thematic reviews, which we will begin to publish on the Evidence Hub during the course of 2018/19; and
- draw the evidence into an active programme of targeted communications to practitioners and funders across the UK.

We are grateful to the 409 organisations that bid into the original What Works Fund, and to all the organisations who developed their original proposals. In 2017/18 we have carried out lessons learned on our processes in order to become an even better funding partner. We will continue this process of self-improvement, with the help of our grant recipients, in 2018/19.

As well as the flagship fund of our What Works Programme, there are also several smaller but equally significant workstreams that we will follow

through in 2018/19:

- In 2017/18 we began work with a consortium of organisations from the financial capability community aimed at understanding the needs of practitioners that, if met, would help to raise the quality and consistency of practitioner delivery across the country. In 2018/19 we will deliver the next phase of this work by working closely with the diverse range of organisations in the community to develop and test a competency framework and determine the best communication and integration routes. We will also map existing standards, resources and training to help develop this work. We will join this to the equally important work we are doing with debt advisers to raise quality (see chapter 2, page 30).
- In 2017/18 we ran a Financial Capability Lab, in partnership with the Behavioural Insights Team and Ipsos MORI, to test 18 new ways of helping people in the 'financially squeezed' segment with their money. These ideas covered a range of key money management challenges, including saving, spending and credit use, and seeking help when it is needed. This innovative workstream has led to at least six initiatives that we want to take forward to the next stage in 2018/19, either through scaling them into pilots that will deliver suitably robust evidence, or working

with partners who have expressed an interest in building them into their own services.

- During 2017/18 we analysed the gaps that have not been filled in the 63 projects in the flagship What Works Fund. We intend to take forward some smaller and more targeted workstreams, totalling about £3m in spend, to look at what works in:
 - the workplace;
 - joining financial capability with debt advice; and
 - completing evaluations of the two winning fintechs that entered the Tech City/MAS sponsored [Fintech for All](#) competition – which shone a spotlight on fintechs wanting to address financial exclusion and financial capability.

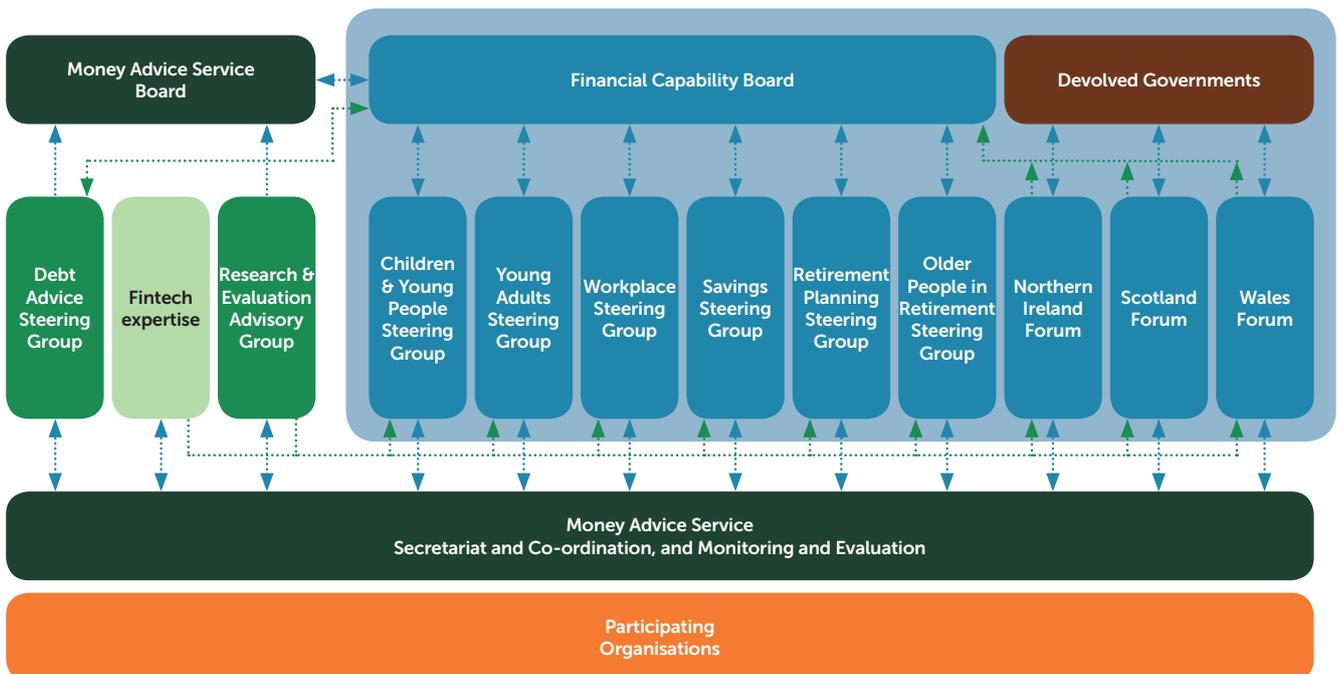

Improving continuous communication

As we move towards involving hundreds of organisations involved in the UK Strategy, we need to find ever-better ways of ensuring relevant, continuous communication.

In 2018/19 continuous communication will have three main strands.

The first is the continuation of the Financial Capability Board and Steering Groups.

We support the Financial Capability Strategy for the UK with a governance structure that enables experts to focus on all the key life-stages during which money needs change, and the differences in people's money needs across the UK.

The Financial Capability Strategy Steering Groups

Together with the [Financial Capability Board](#), the [steering groups](#) continue to play a crucial role in sharing and digesting insight, connecting opportunities, identifying priorities and driving action, as well as helping MAS evolve as the backbone organisation of the UK Strategy.

Children and Young People Steering Group

Working in partnership with delivery organisations, the group is leading the development of a common core set of learning objectives that schools and teachers can use when planning financial education programmes. This will be shared with schools in late 2018. This will contribute to the plan set out in chapter 5 for making the case directly to teachers about the benefits of financial education.

Young Adults Steering Group

The group's main focus is exploring how young adults entering and moving through the labour market, further and higher education, and their social mobility more generally, can be turned into opportunities to support financial capability. For example, apprenticeships engage a large cohort of young adults, so the group is engaging key influencers to bring about the inclusion of financial capability support within apprenticeships.

Workplace Steering Group

During 2018 the group plans to publish a business case for why employers should support the financial capability of their employees. It is intended this will act as a 'living' resource that will allow organisations to make a compelling case for offering financial capability interventions to their workers.

Savings Steering Group

The group's work on rules of thumb will feed into a working group through which MAS will work with stakeholders to test consumer responses to prototype rules of thumb (see chapter 3, page 35). The group will also publish a paper exploring what a savings landscape tailored to the specific needs of life stages could look like. It is intended that this will form the basis for further work to develop and test nudge and auto-enrolment methods to support savings habits.

Retirement Planning Steering Group

In 2018/19 the Retirement Planning Steering Group will be working across three areas:

- understanding which customers are most susceptible to risk in relation to their retirement planning;
- developing and testing interventions with potential to improve retirement planning; and
- looking at what the sector can do to build trust and help people connect with their pensions (making them feel more strongly that pension savings belong to the customer).

Older People in Retirement Steering Group

The group identified an important gap in insight about what constitutes a retired person who is well placed to deal with life events during retirement. Age UK (who chair the group) are leading research to fill this gap, which is expected to be published toward the end of 2017/18. See page 33 for more details.

Cross-group working

As the 'backbone' organisation, MAS supports and enables connections to be made between the different groups' work. The Young Adults Steering Group have established a joint task-and-finish group with the Children and Young People Steering Group to explore the relationship between the financial capability of young adults and social mobility, with a particular focus on young people's transitions into work and further/higher education. And the Savings Steering Group is working with members of the Young Adults Steering Group to explore the efficacy of financial rules of thumb in influencing savings decisions.

[Financial Capability Week](#) has now run for two years, each time in November. It has grown from an event largely showcasing work from MAS to one that highlights great work from other organisations across the country. It is now an indispensable part of our process of continuous communication, with nearly 200 events across the country in 2017. We also want to explore other ways for organisations to access UK Strategy events, such as webinars, which would build on the success of the joint webinar we ran with the Improvement Service in Scotland.

Finally, we will invest significant communications effort in disseminating the results of the What Works Fund alongside the best available evidence from the rest of the world. This information will be available on the Evidence Hub but it also needs to be brought to life and taken out to relevant conferences, newsletters and journals. We will complement the individual learning and sharing plans for each of the 63 What Works Fund projects with co-ordinated, flagship communications in England, Scotland, Wales and Northern Ireland.

Continuing the role of a backbone organisation

It is obvious from the plans above what it means to be the backbone organisation for the UK Strategy. We will need to work carefully to make knowledge and assets available that support the UK Strategy into the single financial guidance body.

By the end of 2018/19 we expect our work under this aim to deliver more and better evidence, a more refined set of tools that stakeholders can use to deliver the UK Strategy, and stakeholder engagement that is both wider and deeper than ever before.

Chapter 2: Earlier and wider access to debt advice

The strategic aim

Aim 2: to support significantly more over-indebted people to access free, high-quality advice, as early as possible, to resolve their crises and build their long-term financial resilience.

Since 2012 the Money Advice Service has had a statutory remit to work with organisations that provide debt advice to improve the availability, quality and consistency of debt advice across the UK.

This has included funding delivery of debt advice, which has risen from supporting 100,000 people per year to nearly 500,000 per year since the funding transferred to MAS.

In 2018/19 our work on debt advice will focus on three main areas: strategic leadership and co-ordination, funding high-quality delivery, and ensuring a smooth transition.

Strategic leadership and co-ordination

We have aimed to lead debt advice in the same way that we have led the broader Financial Capability Strategy for the UK: by acting as the backbone organisation and working with a wide range of organisations across the sector on common issues.

In parallel with the Financial Capability Board, we set up a Debt Advice Steering Group (DASG), composed of senior leaders, and a Debt Advice Operational Group, composed of managers and subject matter experts. Both come from a wide range of organisations.

The Debt Advice Operational Group has succeeded and contributed in areas too numerous to list in full here. In particular it has supported the thinking for, and rollout of, the Standard Financial Statement (SFS). This important tool is now at the heart of the experience of hundreds of thousands of people who have been helped with debt advice since its introduction. It helps creditors and advisers build up the same picture and perspective on the finances of someone seeking debt advice, and promotes people saving a little at the same time as paying down debts.

Since its launch in March 2017 the SFS has been adopted by more than 1,000 organisations. A crucial task for 2018/19 will be to complete the rollout of SFS to the remaining debt advice providers not yet using it. Equally, increasing take-up and use of SFS in a wider range of creditors remains a priority.

In 2016/17 we reviewed the senior body, the DASG, and all concluded that the membership was too large and that it had become unwieldy. In 2017 we revived it with a smaller group of leaders. With them, we agreed

the strategic issues that needed to be addressed in a Debt Advice Sector Strategy. They were:

- reviewing how debt advice is funded;
- customer journeys and handoffs;
- quality;
- creditor practices;
- the range and suitability of debt solutions; and
- improving the longer-term financial resilience of people receiving debt advice.

In 2017/18 we have worked with the DASG to develop the strategic thinking in all these areas. In 2018/19 we will continue to implement the strategy, but with some areas proceeding more quickly than others.

Independent Review of Funding

With the support of the FCA, in July 2017 the DASG appointed an independent reviewer of the funding for debt advice, amid widespread concerns that funding is inadequate, inefficient, duplicative and may be unreasonable in terms of who funds it.

A major landmark was reached with regard to the funding of debt advice when [Peter Wyman published his review on 25 January](#). Reflecting the varied input from stakeholders, Peter's work focused on much more than the funding of debt advice and covered access to debt advice, quality issues and a number of other related areas. His work impacts heavily on the Debt Advice Sector Strategy and we intend to publish it, in conjunction with the Debt Advice Steering Group, slightly later than originally anticipated. We certainly see the Wyman Review as transformational for debt advice and, as such, we will gather stakeholders' thoughts on the Review and ensure they are appropriately reflected in the Sector Strategy.

The Money Advice Service wholeheartedly welcomes the Wyman Review and will seek to deliver on its recommendations. To this end, in 2018/19, we will explore the following, in conjunction with the debt advice sector:

- As previously indicated, we will develop a clear strategic position and delivery options for commissioning telephone and digital services.

- Supporting the sector with innovations that promote greater efficiency and effectiveness, starting with a discovery phase in early 2018/19.
- Influencing take-up of recommendations aimed at others through our strategic co-ordination remit.
- Exploring ways to reduce duplication in the not-for-profit debt advice sector and possibly establish a dedicated Debt Advice Operational Group sub-group to deliver this, if appropriate.
- Seek to work closely with the regulator on the recommendations for the FCA focused on improving standards of debt advice.

Publishing this business plan so soon after the Wyman Review we need to further scope and design work on the recommendations that affect MAS. As a result, to take forward the Wyman Review, we have allocated: £6m of additional funding to frontline delivery (working towards the 50% increase in supply over two years that the Review recommended); £1m to improve quality (again supporting some of his key recommendations); and £1m to drive innovations and efficiencies in the sector.

The FCA has invited us to review whether more funding is needed during the course of 2018/19 to drive forward Wyman recommendations at pace, and we will consider this in the early part of the year.

Other Debt Advice Sector Strategy themes

We expect to develop and continue significant programmes of work to deliver on the other themes of the Debt Advice Sector Strategy. Our What Works Fund will research ways of improving the longer-term financial resilience of debt advice recipients. We are working closely with public sector bodies and will deliver a good practice creditor toolkit specifically for local authorities in 2018/19, building on the one we published in July 2017. We also continue to work collaboratively with a working group made up of Debt Advice Operational Group members to examine, test and deliver improvements to customer journeys through debt advice. Specifically for 2018/19, in collaboration with this working group, will undertake pilots to test infrastructure which facilitates enhanced referrals and information sharing between creditors and advice agencies.

Just as importantly, we will work with DASG members to help them promote the principles agreed on in the Debt Advice Sector Strategy and embed its thinking in organisations they manage or influence.

Funding high-quality delivery

In December 2017, consumer credit lending stood at £207.1 billion – a 9.5% increase on 12 months previously. It has been increasing since 2014 with an annual growth rate of between 5–11%.

There have been significant shifts in the nature of over-indebtedness. Since last year, the over-indebted population has grown from 7.9m to 8.3m, which is a growth of 4.2% year on year.

And supply does not match demand. During 2017 we conducted a survey of the supply of debt advice and mapped this to who needs it across the UK. This told us that the latest snapshot of need (based on 20.5% of the over-indebted population engaging with debt advice) was 1.7m people. The supply of debt advice provided for 1.06m people, a gap of 640,000. The same analysis a year before showed a gap of 550,000. So the gap between supply and need has grown by more than 15% over the course of 12 months.

The rise in the debt advice levy in 2018/19 from £48m to £56.3m will not enable us to fully close the gap, but it will enable us to increase the supply significantly, so that more people get debt advice. We also will give advisers the opportunity to spend, on average, 10% more time for each client while, through alterations to the channel mix, raising delivery numbers overall.

Our Debt Advice Commissioning Strategy

As well as the Debt Advice Sector Strategy, in 2017/18 we consulted on a new approach to the way we fund delivery. We have now published our [Strategic Approach to Debt Advice Commissioning 2018–2023](#), so again here we only touch on highlights. But some key elements of this Debt Advice Commissioning Strategy are:

- introducing a target audience that we want to proactively attract to debt advice, as well as supporting existing demand;
- dividing England into nine regions for commissioning, so that we can commission in a way that is more sensitive to local needs and supply;
- improving customer journeys and capturing data about clients who move from one organisation to another over the course of their journey; and
- a technology strand, to make sure that digital self-service is used to best effect and other technological advances are shared with the sector as early as they can be fruitfully used.

Many of these themes were mirrored in the Wyman Review and we will ensure we align both the rollout of the Commissioning Strategy and our response to the Independent Review of Funding.

In 2018/19, we will develop funding arrangements for two of the nine English regions: London and the North-West. These commissioning proposals will apply the six principles of our new commissioning approach. The regional arrangements will be part of a rolling programme that learns as it goes, so that over the course of the Debt Advice Commissioning Strategy the whole of England will be commissioned following the new approach,

but with learnings from the first regions incorporated into later funding rounds.

We will introduce co-design into the development of the agreements for London and the North-West. This means involving both service delivery organisations, and over-indebted people, in the development of the service offer and the management arrangements that will support it. We believe this user-centred approach will significantly improve the new services.

A critical part of the Debt Advice Commissioning Strategy will be our approach to quality and training. We will apply this to our work in the two English regions indicated above, but will also be applying the same principles to our funding in other new and continuing agreements.

Quality and training

Client satisfaction with the debt advice they receive, and their propensity to take action to address their debts, have remained at high levels, while volume has significantly increased. But what we have seen and been told by our partners in the sector has given us cause to home in on the following themes in relation to quality:

- Do clients always get the best advice for their unique individual circumstances?
- How often do debt advisers focus on the long-term needs of clients, and how often do they only focus on the here-and-now?
- How consistently and well are records kept, so that third parties can be sure the debt advice given was right for the client?

An invitation to co-fund

Our Debt Advice Commissioning Strategy includes a principle that we want to fund advice that is holistic, where it is possible to join with other providers to address people's problems 'in the round'. To make our delivery as effective as possible, we are interested in entering into discussions with private foundations, charities, corporate social responsibility arms of private businesses, and public sector funders about how we can work together to deliver debt advice alongside other advice needs. In 2018/19 we will be focusing on new funding arrangements for debt advice for London and the North-West, so we're particularly interested in organisations operating in these two regions of England.

If you would like to discuss these matters with us, please contact us on

co-funding@moneyadviceservice.org.uk

To help us explore and address these challenges in partnership with the sector, in 2018/19 we plan to introduce an enhanced Performance Management Framework for our funded advice. This will build on an existing scheme, which currently supports debt advisers from one organisation to consider the work of their peers at another organisation. But it will include new elements of audit (traceability back to an individual organisation, adviser and session), and transparency.

To support organisations with quality, we plan to spend more on:

- the training we fund;
- helping debt organisations to share good practice and continuous improvement;
- embedding a consistent approach to professional development and technical debt advice supervision within our funded services; and
- accreditation.

We will invest just over £1m of the £56.3m funding in the performance management framework to support and empower the workforce of debt advisers. We will deliver this framework in a way that complements and strengthens the financial capability practitioner work described on page 25 above.

Ensuring a smooth transition

We anticipate that the single financial guidance body will only fund the delivery of debt advice in England. Under the Bill going through Parliament, funding will continue to be collected by the FCA, passed to HM Treasury and distributed directly to the devolved administrations. However, under the same Bill the single financial guidance body will have a remit for a national strategy to improve the ability of members of the public to manage debt, and this remit will be UK-wide.

We will ensure that the delivery of high-quality debt advice sessions continues through transition and that service users are minimally aware if at all of any changes. We are working closely with devolved government representatives to ensure a smooth transition.

Whatever arrangements are chosen, we are dedicating programme resource and funding to ensuring that we are able to hand over know-how and relationships in Scotland, Wales and Northern Ireland.

An ambitious year for debt advice

Our three priorities of strategic co-ordination, funding high-quality delivery to meet a higher level of demand, and ensuring a smooth transition, will mean that our board and leadership will need to turn more of their attention than ever before to our debt advice work in 2018/19.

We believe that the programme we have set out here will provide considerable momentum to the sector and result in many tens of thousands of people receiving excellent debt advice.

Against a backdrop of financial difficulty and economic uncertainty these are some of the most important ways that the Money Advice Service will change lives in 2018/19.

Chapter 3: More people budgeting and saving

The strategic aim

Aim 3: to help people most at risk from income shocks to manage their money and credit well day to day, and to build resilience by saving more for the future and protecting themselves against the unexpected.

When we set out our Corporate Strategy in 2015, we identified 11.6m 'financially struggling' and 12.7m 'financially squeezed' adult consumers who typically have a small amount of savings set aside and are, as a result, vulnerable to financial shocks.

We know that 7 in 10 people face an unexpected bill each year. This is typically between £200–£400, but can be much higher – such as £1,341 for the average car-repair bill.

So, if we can engage and support more of these people to manage their money (including credit) well day to day, build savings for both the short term and long term – and to protect themselves against the unexpected, such as through insurance – then we can make a real difference to their lives and, especially, could help them from becoming over-indebted when they do hit an unexpected financial shock.

To address this huge challenge, we have been building the evidence base. Although, through our direct channels, we support millions of 'financially struggling' and 'financially squeezed' consumers each year, helping them to plan their money lives better, we are now building the evidence for what more can be done by working with and through others.

In 2018/19 we will bring these strands together in a commissioning plan for working-age people aged 18 to 54. Alongside this, we will consider the financial capability needs of those aged 55+ moving into retirement. The latter will be done in close collaboration with The Pensions Advisory Service and Pension Wise as we move towards the single financial guidance body.

Building the evidence base

The strategic aim set out in this chapter is especially ambitious when we look at the needs of people in the 'financially squeezed' segment. They are typically of working age, on or close to average incomes, and range from young adults transitioning to financial independence as active economic actors and consumers to those moving into and living in retirement. This segment comprises many couples

and families with children, living in mortgaged or privately-rented accommodation, and in employment. Since we began our Corporate Strategy we have carried out more research to understand the needs of people of all working ages in this segment.

Compared to the population at large they are more likely to say they struggle to keep up with bills and commitments, less likely to be confident choosing financial products, and less likely to have a budgeting approach that they feel works well for them as individuals or for their household. They are more likely to use high-cost short-term credit, not least because they need credit unexpectedly. Generally, they are less engaged with financial services, guidance and advice – including debt advice.

The total adult population of the two segments we have looked at in detail is more than 24m people, so it is very important that we prioritise those most in need. Based on best available evidence examined to date – albeit conscious that many older people in retirement also need financial capability support – we have decided to focus our first round of commissioning activities on target groups within three working-age cohorts.

- Young adults aged 18 to 24 (4.34 million from the 'financially struggling', 'squeezed' and 'cushioned' segments). These young adults are striving to establish their own financial independence: they are entering an uncertain labour market or accessing limited welfare while job seeking; they are managing money from student loans and other sources while completing their studies in further or higher education; and they find themselves as less-experienced and less confident consumers of banking, credit, paying bills and other services. Many will remain in the family home until well into their 20s and even 30s. We have also taken a careful look at sub-segments within the 'financially cushioned'. Several of the financial indicators from the 2.2 million young adults within this segment, which comprises a large chunk of the UK student population, resemble financially 'struggling' and 'squeezed' young adults. Our investigation into channels to reach them also show significant overlaps. So, we have decided to include them within the young-adults target segment.

- Young couples and families aged 25 to 34 (3.03 million from the 'financially struggling' and 'financially squeezed' segments). They are more typically experiencing life events and transitions such as setting up home together, planning for parenthood and raising younger children, at the same time as building working lives. Many face variable living costs, and must deal with welfare reform, consumer debt, student loan repayments and constrained wages.
- Middle-aged couples and families aged 35 to 54 (5.57 million from the 'financially struggling' and 'financially squeezed' segments). They are more typically experiencing life events and transitions such as relationship breakdown or redundancy. Planning to support elderly relatives – and their children who enter adolescence and reach adulthood – are also common challenges. This is within a context of variable living costs, welfare reform, consumer debt, constrained wages and the personal challenge of funding a decent retirement.

A commissioning plan for working-age people

Within each broad age cohort, we must review the best available evidence and consult stakeholders to define more fully which groups to target and through which channels – including our own direct channels or funded debt advice. We must also be conscious of systems, local agencies and policy developments in England, Northern Ireland, Scotland and Wales when proposing geographical areas.

An important part of the evidence base will come from the £7m What Works Fund, announced in 2017/18, to gather evidence from interventions already happening across the UK in a wide variety of settings. We are funding over 60 projects across the UK and expect them to provide evidence of their impact on consumer behaviours from the middle of 2018. Around two-thirds of the projects are targeting working-age adults aged 18–54 ranging from young adults to those moving into retirement.

How MAS is serving older people

A key challenge for older people is the need to manage financial resources over their entire retirement, balancing the need to make ends meet day to day while preparing for and managing expenditure related to life events. Life events that typically affect older people, for example ill health, care needs, and bereavement, are unpredictable and can derail financial plans overnight.

We support older people through our direct channels. Over 2016/2017, our funded debt advice partners supported more than 73,000 older people to take control of their money. Of users visiting the MAS website, 17% were aged 55 and over, a total of 2.25 million, and many thousands called us for help.

The Older People in Retirement Steering Group is chaired by Jane Vass from Age UK, and is creating a community of practice drawn from different stakeholder organisations who are focusing on where their collaborative efforts can have a real impact. A priority for the Steering Group has been to better understand what being financially capable for later life means. MAS provided funding for Age UK to undertake research that is building a picture of what someone who is well-placed to manage in retirement looks like. A report from the findings will be launched at an event in late April/early May 2018. The Steering Group have had early sight of the research findings and are working to develop priority action areas that they will explore in 2018.

Learning from the research has highlighted specific issues among this age group that will be further explored in the 2018. We have been working with Age UK to develop a clearer picture of what constitutes financial capability for older people. Based on this, we have updated the adult Financial Capability Survey questionnaire for 2018 so it provides better measures of financial capability issues for older people. This will produce better evidence to inform the design of interventions for older people. We expect to share high level findings from this with the sector in late 2018.

The 10 What Works projects that target the 60+ age range are building evidence of the types of interventions that can make a measurable difference to people's financial capability in retirement. Through this work we are building a richer picture of needs of older people in retirement and how best to address them.

During the period of our Corporate Strategy 2016/17–2018/19 our strategic prioritisation led us to focus on children, young people, working-age people, as well as debt advice for people of any age. We believe that the new remit of the single financial guidance body, and the research and thinking we have outlined above, will provide a solid basis on which to prioritise direct and indirect service offers from the new body towards people aged 55 and over.

Additional evidence will come from research, data and insight gathered from our own and external sources. This includes results from wider What Works Fund activities beyond the current set of projects, plus academic studies and a broad range of consumer insight about the working-age population. So, an important part of our work this year will be to digest and synthesise all these sources to consider:

- Does the evidence of impact justify scaling an intervention to help more people in the target groups?
- If so, who is best placed to fund this – is there a business case for others to fund or co-fund these interventions?
- Do we want to gather evidence again in six or 12 months' time to see whether impact is sustained?
- If evidence of impact is only partial, which techniques could be merged with the evidence from other projects or sources to create more impactful interventions?

Our commissioning plan for working-age people, which we intend to publish for consultation during 2018/19, will create a set of costed and scoped proposals that the single financial guidance body can, if it so chooses, adopt.

There should be no artificial distinction between our ability to support working-age people wherever they seek guidance and support. So, where people access debt advice, yet their presenting situation requires money guidance rather than a regulated debt solution – or there is an opportunity to build financial resilience and capability in those who have benefited from a regulated intervention – then there should be no issue in commissioning these agencies to deliver money guidance alongside this. Equally, digital guidance can make it easier and more attractive for people to plan for their financial futures. So, the work described in chapters two and four of this plan will be highly relevant to, and well-connected with, this commissioning plan.

Our commissioning plan will set out which groups within the three age cohorts we intend to target (and where), which outcomes we plan to measure – and the balance between influencing others, funding delivery through a commissioning approach, and how our direct digital and helpline channels can offset and complement both.

Calibrating the scale of ambition for such a plan is an important but difficult task when the scale of the challenge is so large, so we intend to publish the plan for consultation. Our current thinking is that for the first year of the commissioning plan from 2019/20, we would propose about £1 million

of externally-commissioned funding for each of the three age cohorts described above, targeted at specific groups and spread across the UK. Our ambition is also to maximize co-funding, and align other organisations' funding towards the same target groups and interventions that have evidence of impact. The general principle is to start small and targeted and to prove the case for impact at scale.

Influencing and working with others to support adults of all ages

As well as working towards our commissioning plan for working-age adults, during 2018/19 we will also seek to influence and work with others as we build evidence on interventions and approaches that can support adults of all ages in post-school education, during working life and in retirement.

We will continue our collaboration with the National Association of Student Money Advisers to develop a diagnostic tool of the UK student population and a toolkit linked to the NASMA website to help student money advisers in the colleges and universities where they work to design better provision to support the financial capability of students.

Alongside JP Morgan Chase Foundation, we will be co-funding a field trial with employers, delivered by Nest Insight, to test a concept called 'sidecar savings'. These are additional contributions that employees can opt to make from their salary into a fully-liquid savings pot, at the same time as making automated pension contributions. Employees can access funds in this liquid savings pot at any time, for example when they experience a financial shock. But a cap applies to it, above which any excess flows into the non-liquid workplace pension, accessible at retirement.

We believe that the workplace will prove a very significant arena for evidence-based delivery over the longer-term. Although we have funded some workplace interventions in the current What Works Fund, in 2018/19 we are going to use some of the new What Works funding to spread our net wider across multiple workplace settings and providers, considering financial pressures faced by different categories of worker on modest incomes, possibly including the self-employed.

During 2018/19, we will support the Government working group as it moves towards developing and delivering a Pensions Dashboard. We believe a fully effective Pensions Dashboard will be an important tool to help motivate people in the 'financially struggling' and 'financially squeezed' segments to understand what they are saving during their working lives and as they move into retirement.

We will continue to build on the work, handed to us by a working group of the Financial Advice Market Review, to develop salient and actionable financial 'rules of thumb' for different consumer groups during their adult lives. Having already considered 'rules of thumb' of resonance to young adults moving into the labour market, and working in collaboration primarily with the Savings & Protection financial capability steering group, we will now turn our attention to:

- developing more precise guidance for young consumers, which supports the credit decisions they must take; and
- developing financial rules of thumb to help people prepare for income shocks associated with an unexpected life event.

We also intend to take forward at least two of the 18 concepts tested in our What Works Financial Capability Lab that ought to have salience to adults of all ages. Examples include:

- checkout savings, which is a way of instantly banking the results of supermarket savings at the checkout. This had excellent resonance with consumers and we are exploring partnerships with major retailers.
- cook and save, which links saving behaviour to other life goals (such as healthy eating). We are seeking partners to test this at pilot scale.

Using our direct channels to support adults of all ages

Our commissioning plan for working-age people aged between 18 and 54, as well as how we support those aged 55+ and moving into retirement, will include consideration of what we deliver directly through our digital and helpline channels. Two key areas focus on matters related to welfare support and to retirement planning.

Money Manager, our budgeting tool to help Universal Credit claimants with moderate support needs manage the transition to monthly payments through a transactional bank account, has been available since February 2017. In early 2018, we enhanced Money Manager to reflect payment flexibilities available to claimants in Northern Ireland and Scotland. The tool signposts claimants in severe financial difficulty or who lack digital skills to more specialised and localised support services, including our debt advice locator tool.

As the rollout of the Government's Universal Credit programme proceeds, we will continue to review the support we offer to claimants online and through our helpline. This is particularly so because more in-work claimants and households will transition to Universal Credit over the coming period. We are also exploring how we can engage and support in-work Universal Credit and Working Tax Credit claimant households to determine whether and the extent to which they can manage their household income to build savings through the Government's Help to Save scheme.

And during 2018/19, we will look to make our customer journey for those aged 55+ even more salient and actionable as they start calculating, accessing and managing their income in retirement. This will include enhancements to our tables and customer journey on options for guaranteed income (annuities) and/or income drawdown for those with pension pots and moving into retirement.

An invitation to co-fund

Our commissioning plan for working-age people aged between 18 and 54 will aim to co-ordinate the impact and effectiveness of multiple funders. To make our plan as effective as possible, we are interested in entering into discussions with private sector foundations, corporate social responsibility arms of private businesses, and public sector funders / commissioners about how we can work together to improve the money management skills of working-age people.

If you would like to discuss these matters with us, please contact us at co-funding@moneyadvice.org.uk

A joined-up commissioning plan for budgeting and saving

Our commissioning plan for working-age people aged between 18 and 54 will maximise all the consumer contact we have, to make effective inroads into key segments among the 'financially struggling' and 'financially squeezed'. It will consider the role of information and money guidance as well as 'nudges' and direct-to-consumer education. It will also set out how we can make debt advice build long-term resilience and enhance financial capability for people in these segments.

And it will maximise what we can achieve through others, whether we influence and support good work they can do without our funding, or whether we fund them directly.

Given the scale of the challenge, we suggest that the funding for external commissioning (ie, funding flowing to external organisations for delivery) in the first three years covered by the commissioning plan should start in the very low millions, to prove that delivery at scale can have an impact.

Chapter 4: Improving access to guidance and advice

The strategic aim

Aim 4: to help more people make use of good-quality, effective financial guidance or advice when they need it.

Almost six in ten working-age people in the UK are either 'financially struggling' or 'financially squeezed'. And within these, 3.2 million find it difficult to keep up with their bills and commitments and have not recently accessed any financial information, advice or guidance. Financial help and support, in the form of guidance and advice, can be essential in enabling millions of adults of all ages to deal with the complexities of major financial decisions and the often difficult balancing act of managing everyday finances.

For those who do seek help, as many as 40% feel that they don't get what they were looking for.

Whilst millions of people across the UK do benefit from the vital financial guidance and advice that is available – whether from MAS or other providers – clearly, much more is needed to ensure that the right help is available in the right place and at the right time.

This challenge is one of both access and engagement, and our aim is to work with the wider range of providers to take significant steps forward in both.

Improving access

For those who take the time to look for the help they need with their finances, it is vital that it is accessible, good-quality and effective. Sometimes it will be from MAS, but often it will be from others. Building on much good work that has already been done to improve the standard of provision, we will continue to make focused improvements to our own services while also working with other organisations to help them to improve theirs.

Through our own website and contact centre, we reach more than 10 million people each year, almost half of whom are in our target segments of the 'financially struggling' or 'financially squeezed'. We will continue to improve the quality and effectiveness of our services, particularly focusing on what we believe to be the most important financial matters for these two segments.

We have begun the robust evaluation of our own online tools, applying the principles and tools

that we have developed for use across the sector to understand what impact these tools have on customers' financial capability. We started with an evaluation of our [Budget Planner](#) and will publish the results on the [Evidence Hub](#) in spring 2018. We will take the learnings from this evaluation to make targeted improvements to our tool so that customers who use it have a better chance of achieving their financial goals.

We will also make improvements to customer journeys for certain key life events, for example, going through a divorce or separation.

Guiding people towards regulated advice can, at times, be the most appropriate next step. Our approach to this will continue and grow. For instance, we guide customers who call our contact centre to debt advice providers, if they are struggling under the weight of their debts. On the subject of pensions and retirement, our [Retirement Adviser Directory](#) is a key service we will keep up to date. Similarly, the most appropriate next step in a customer's journey may be to another guidance provider or a financial services firm. Where we believe this to be in the best interest of consumers, we will increase our level of signposting.

Investment in improving our own service needs to be balanced with helping other providers to improve theirs. Following on from our prior year commitment to support third-sector organisations to improve the reach and effectiveness of the digital money guidance they offer, such as sharing expertise in Search Engine Optimisation (SEO), we will continue to offer this support. We encourage third-sector providers to get in touch with us if they are able to make use of this support.

The continuation of the What Works Fund is a major way in which we are investing in other guidance and advice providers. In addition to the direct funding of vital services to different groups of people, the invaluable learnings that we will gain from these projects will be useful to a range of guidance providers. Combined with wider evidence, this will enable us to develop our understanding of what may or may not work, and why, so that we can focus our efforts on doing the things that are most likely to make a real difference to people's lives.

The landscape of provision is changing at increasing pace, as are consumer needs and preferences. It is therefore more important than ever that we find innovative ways to understand the market. Working with a specialist online consumer insights provider, we will continue to map and monitor consumers' online behaviours in seeking help across the different areas of their finances. These insights will help us to better understand the online market – where provision may be lacking and the areas where we need to prioritise our efforts. We will work with partners to explore how we can best share these insights with other providers.

Building engagement

Even the greatest service won't make a difference if people don't use it. And we know that, unfortunately, many people who need help don't seek it. In November 2017, we published our research into this challenge: [Right Place, Right Time – Helping people with their finances when they need it most](#). This research explores the main reasons that so many people don't make use of the help and support available, and how this varies by the event that they are going through. The insights from this work will be crucial in enabling us, working in partnership with others, to develop new interventions that increase our collective reach, by tackling specific barriers in specific contexts.

We think that our biggest opportunity to take a significant step forward is to focus on the 10% who recognised that they needed help but, for specific

reasons, did not go on to seek it (highlighted in the diagram on the next page). There are two million people in the 'financially struggling' and 'financially squeezed' segments who fit these criteria.

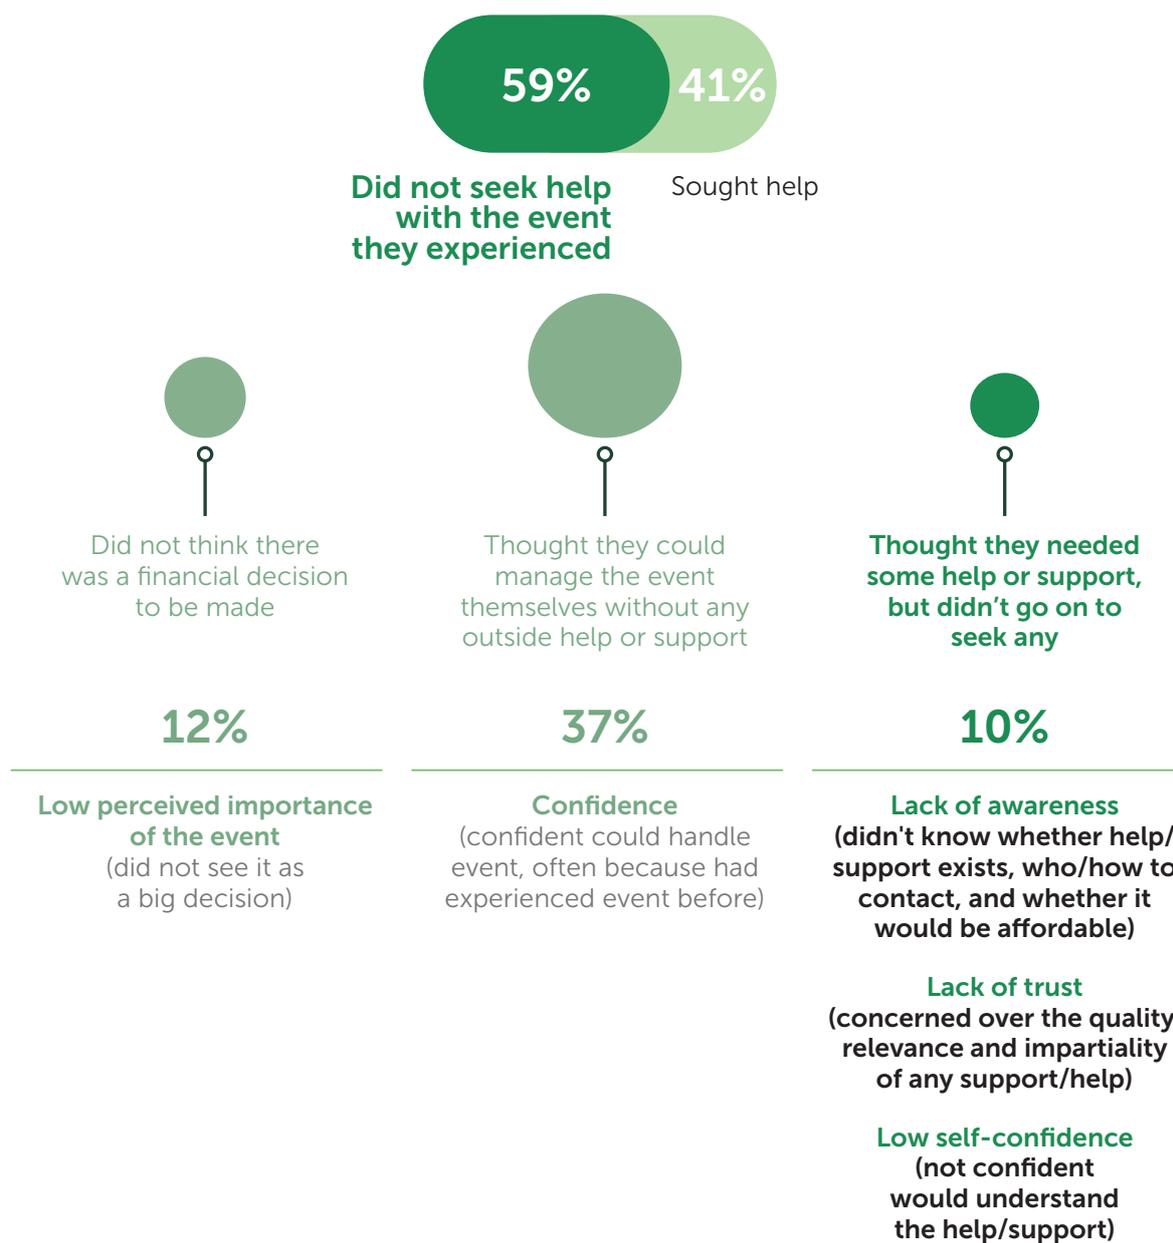

The main reasons for these people not going on to seek help, despite recognising the need, were a lack of awareness or trust in what is available.

While general awareness-raising is important, we don't think this is enough.

In the context of increasingly busy lives, messages need to be focused, timely and relevant. In some cases, this may require a targeted campaign, and in others it may need active outreach to extend a helping hand to people in difficult situations.

We will be using these insights to improve and evolve some of our own services and activities, particularly: distribution of our printed guides, syndication of digital content and tools to partner websites, and timely consumer engagement through the media and social channels. Each of these presents opportunities to reach people who may not otherwise get the help they might need.

Taking this further, we will explore new partnerships to integrate financial guidance into other types of services. One idea, that emerged through our Financial Capability Lab partnership with the Behavioural Insights Team and Ipsos MORI, is to integrate signposting of financial guidance into the Government's bereavement information and support services. We know that, due to the overwhelming nature of the situation, people are unlikely to seek help with their finances during these times, despite there often being a need to. Using our insights on engagement barriers along with an understanding of behavioural economic factors, we have an opportunity to help many more of the hundreds of thousands of people who deal with the death of a loved one every year. This is just one example of using this research to home in on a particular life-event and work collaboratively with other organisations to improve engagement.

Events listed as prompts to consider when help was or wasn't sought

General finances

- Thinking about general money management
- Making a major purchase (eg new car/home improvements)
- Having debts that were causing problems
- Having a lump sum of money to invest (eg inheritance)

Work and benefits

- Starting a new job/got promoted/significant pay rise
- Seeing a change in benefits receive
- A negative work event (eg being made redundant)

Planning for retirement

- Reviewing how currently saving for retirement
- Start to save for retirement
- Starting planning to access retirement funds

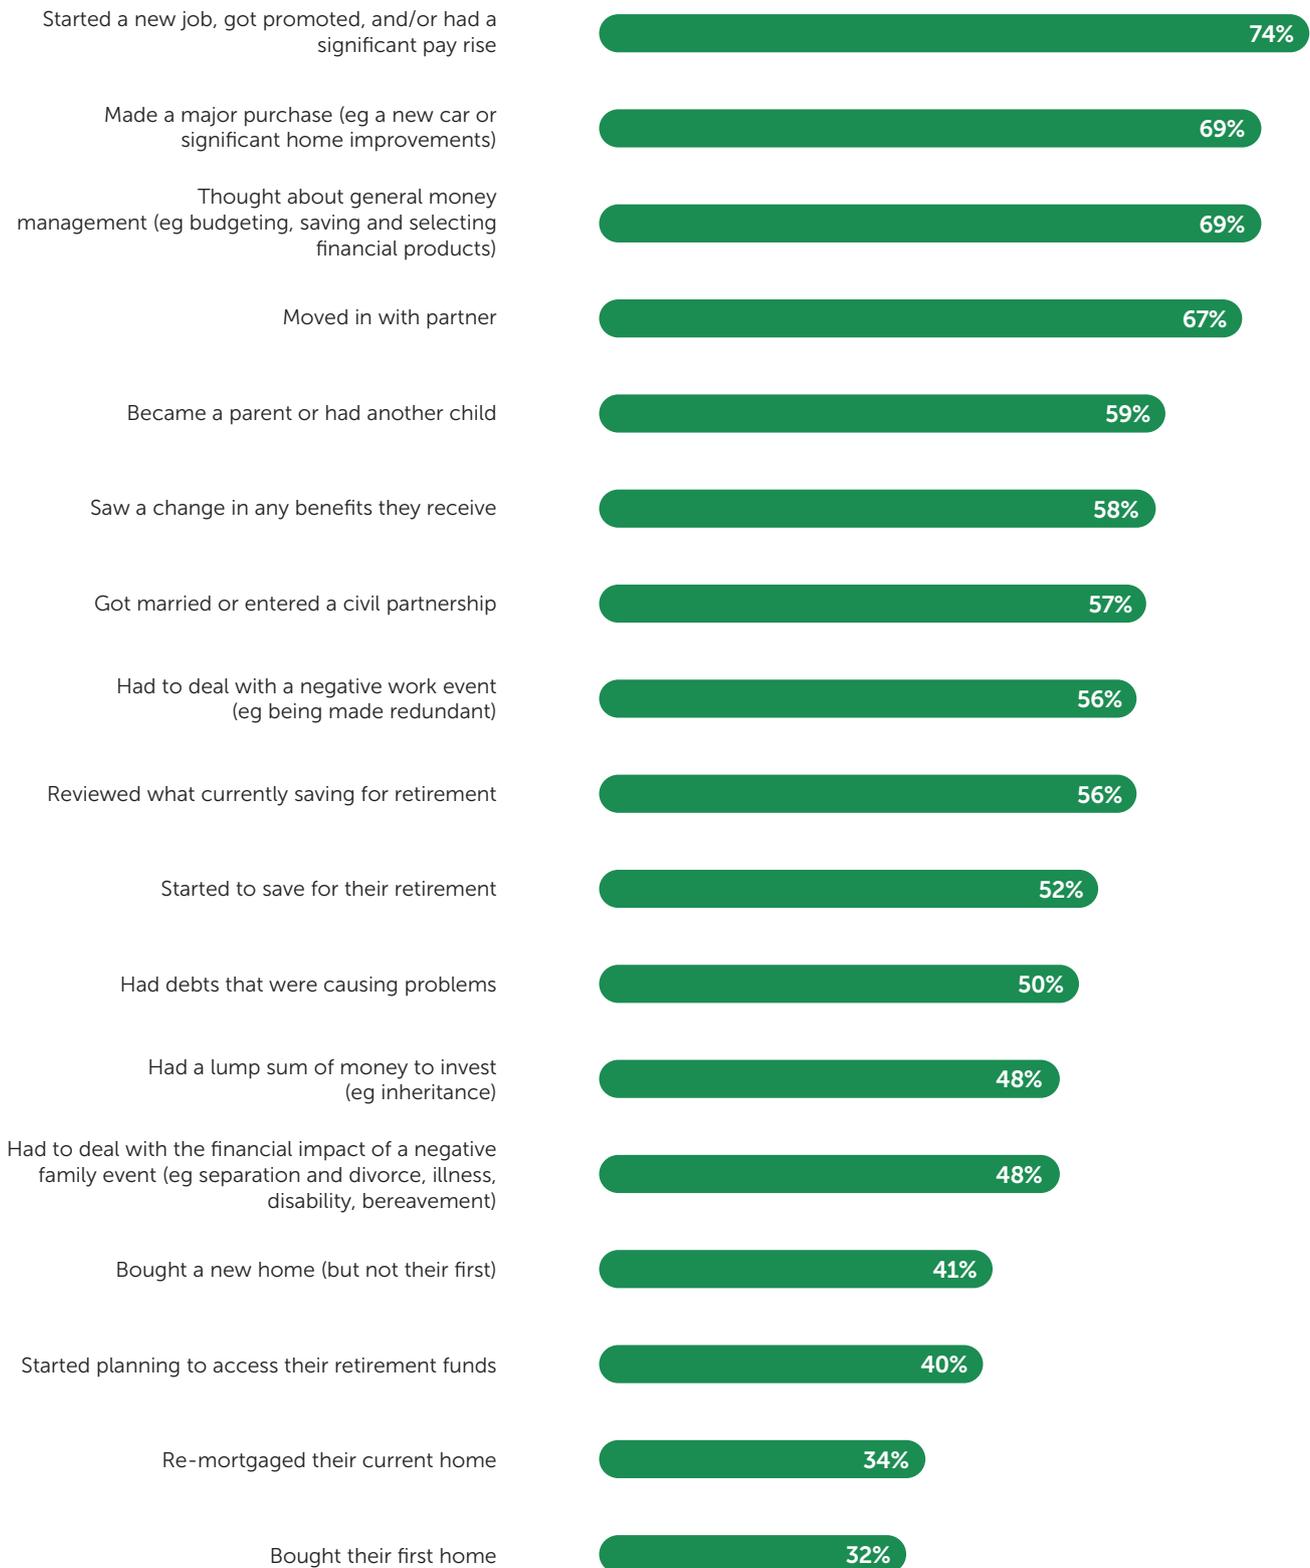

Family

- Financial impact of a negative family event
- Moving in with partner
- Becoming a parent or had another child
- Getting married or entering a civil partnership

Home

- Buying first home
- Remortgaging current home
- Buying a new home (but not first)

People in the 'financially squeezed' segment who did not seek help – listed by life event

Our Welsh Language Scheme

Ein Cynllun Iaith Gymraeg

Our Welsh Language Scheme is linked to the Money Advice Service equality and diversity policy. Our commitment is that the Money Advice Service values diversity and works inclusively. This enables us to meet our core aim of helping people take control of money to enhance their lives.

As part of this commitment, key services we provide in Welsh are:

- our website, available in both English and Welsh languages. Exceptions to this are video content and all digital media that works within an environment of instant communication, such as social media;
- our telephone-based money guidance; and
- face-to-face debt advice services, provided by the lead organisations we fund, deliver sessions in Welsh.

The Money Advice Service Welsh Language Scheme was approved by the Welsh Language Board on 26 March 2012, and we continue to take into account new legislative developments regarding use of the Welsh language.

Our full Welsh Language Scheme is available on our website.

The Welsh language version of our website is at: moneyadviceservice.org.uk/cy

We submit an [annual monitoring report to the Welsh Language Commissioner](#).

The final version of this business plan will be translated into Welsh.

Focused investments in our guidance, alongside helping others

Our 2018/19 priorities for our guidance offer will be to make evidence-based and focused improvements to our services: website, contact centre and printed guides. We want to make them more relevant and effective for people in the 'financially struggling' and 'financially squeezed' segments, while continuing to serve demand from people in the 'financially cushioned' segment at a low cost-to-serve.

Our priority for working with other organisations will be to focus on: supporting providers who are best placed to reach certain groups of people; working in partnership together to co-develop new interventions that overcome engagement barriers; and building evidence of what works through completion of the What Works Fund projects and through wider evidence building.

These are small steps in a much longer and larger journey, that we anticipate the single financial guidance body will continue, to ensure those most in need can – and do – access good-quality, effective financial guidance and advice.

Chapter 5: Widening and improving financial education

The strategic aim

Aim 5: to improve the ability of children and young people to manage their money and make good financial decisions.

Just as with our approach to working-age people set out in chapter 3, for the last two years we have been addressing the challenge of financial capability for children and young people by pursuing four parallel areas:

- What is the need?
- Which solutions could work?
- Who can we influence?
- What should we fund?

When we have a good understanding of these, we intend to set out a commissioning plan with the measures and outcomes it could achieve.

But there are several important complications when we consider children and young people:

- What parents do in the home is as important as, if not more important than, teachers.
- Nobody expects the money guidance levy to pay for teachers' salaries to deliver financial education.
- Education, and children's services more widely, are devolved in Northern Ireland, Scotland and Wales, so each country of the UK has its own policies and priorities.
- As in many other aspects of life, 'children' become 'adults' at different ages, and our goals for 'adults' and 'children' need to subtly blend. (A care leaver or young parent may be living independently, sometimes with little family support, before the age of 18; a very well-off student, by contrast may not receive their first pay packet until their mid-twenties.)

For these reasons, we expect that the commissioning plan we publish in autumn 2018 will have to be subtle, nimble and creative if it is to bring together these diverse impulses in a plan that will truly generate step-change in relation to a difficult problem. It will, of course, be aligned with commissioning activities proposed for young adults set out in chapter 3 (see page 32).

What is the need?

We have looked at need through three separate lenses.

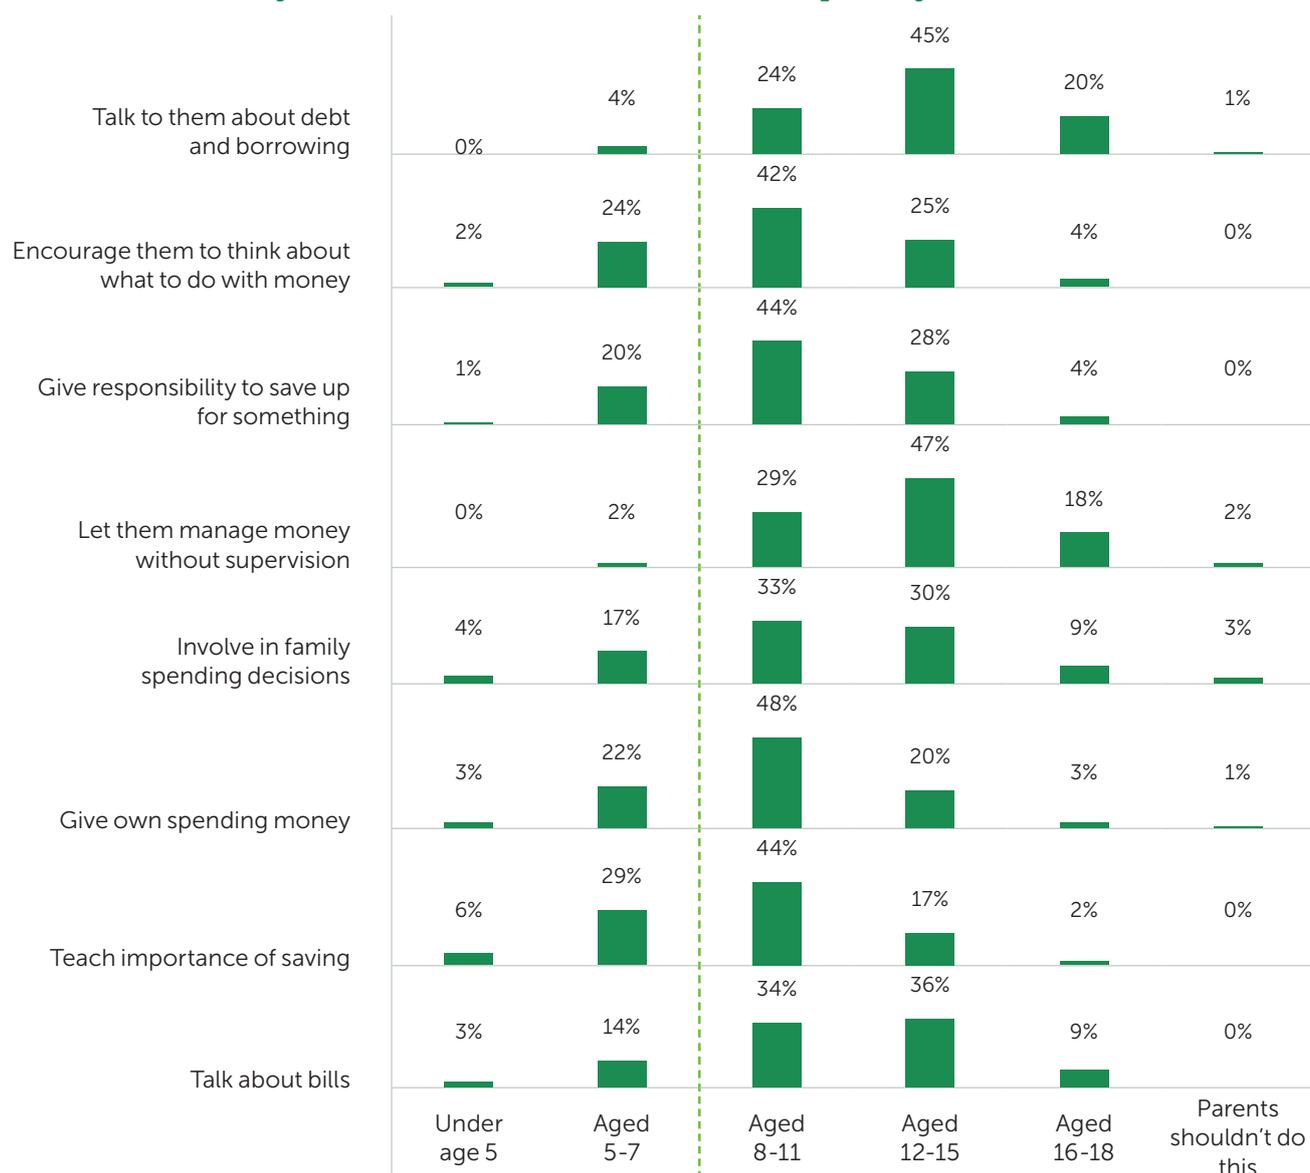

First we looked at children and young people (and their parents) overall. In March 2017 we published [The Financial Capability of Children, Young People and their Parents in the UK](#). (Separate research reports are also available that look at the individual circumstances of children and young people in [Northern Ireland](#), [Scotland](#) and [Wales](#).) A total of 4,958 children and young people aged 4–17, and their parents, were interviewed for the UK-wide survey. The survey is a treasure-trove of information that we are still exploring, but some key UK headlines were:

- children did worse on a number of financial measures where parents decided for them how to spend their money;
- conversely, the survey underlined the importance of regular pocket money; children who received regular money did better on a number of measures; and
- only 40% of children aged 7–17 said they had learned about managing money at school or college.

Separately, we have been tracking a cohort of 15- to 17-year-olds for three years to examine their transition to adulthood. We will have the results of this, which should provide valuable lessons about the complex money transitions happening when they turn 18, in 2018.

Second, we conducted analysis of the 1970 British Cohort Study and uncovered that childhood skills from as young as the age of 5 predicted adult financial outcomes decades later, even after controlling for factors such as household income, highest level of educational attainment, and employment. The ages of 5–10 were a particular turning point. This piece of work provides us with useful insight on how best to target those most in need.

Parents as a key influence on children's financial capability – results from Wales

In November 2017, we published our detailed analyses of children's financial capability in Northern Ireland, Scotland and Wales. This graphic shows Welsh parents' thinking about when it is appropriate to talk to their children about certain money topics. The most common period that parents think they should begin addressing these money matters is between the ages of 8 and 11, and in certain cases, 12–15. Our evidence suggests parents need to be comfortable starting much earlier, and our commissioning plan will need to influence parents in the home as well as school and community settings.

Third, we looked at the particular needs of vulnerable children and young people through a literature review. Vulnerability comes in many different forms, but the needs of children and young people who are carers, or who are/have been in the care of local authorities, seemed particularly noteworthy based on research to date.

We are combining all three strands of insight into a statement of needs that will identify the target cohorts and outcomes our commissioning plan needs to address.

Aligned with this work, we are in the process of mapping provision across the sector to give us much deeper understanding of what is being delivered where, to whom, how it is funded, evaluated, and how many are reached. We want to know in much more detail what is happening in schools too, and so fieldwork will start in 2018 to

survey how well schools in England are supporting 11- to 18-year-olds to develop their money skills for life. And building on this we have developed a basket of measures that when tracked together, will help us to reach an overall view of progress against our theory of change. Some or all of these measures will become outcomes indicators for the commissioning plan that we will publish in autumn 2018.

Which solutions could work?

Our What Works activity to find out what could work for children and young people has two main strands.

We have been conducting two very large control trials that take place over a long time period. These are our two larger investments for children and young people, and they both continue into 2018/19:

- **Talk, Learn, Do** has been introducing parents and children to lively, experiential financial education in a large-scale pilot in Wales. All across Wales, parents who were taking part in existing parenting classes received an extra two-hour module that supported them to talk to their children about money. It was co-funded by the Money Advice Service and partly by Big Lottery Wales. It proved to be a popular module with both parents and practitioners. So although final results are not due until summer 2018, on the basis of the enthusiastic response from participants and delivery staff, we are hopeful that the final evidence will highlight 'Talk, Learn, Do' as an exemplar for future delivery and we will consider how to take the findings forward in 2018/19.
- **Maths in Context**, which we co-funded with the Education Endowment Foundation and is delivered by Young Money, involves training maths teachers in England to use real-world contexts when teaching GCSE maths, especially using examples related to personal finance. The aim is to make maths more accessible, engaging, and relevant to real life, while also preparing students for the types of questions they might face in exams – and simultaneously improving their financial capability. Delivery began in September 2017 and results are expected in 2020.

Although the principal goal in funding these projects is to gather evidence of what is most effective, along the way they will have helped many thousands of young people (and many parents) to manage their money better.

At the same time as these larger investments, we have also made a series of smaller investments, by funding 26 valuable and innovative smaller projects (12 for children and young people below school leaving age, and 14 for young adults) for children, young people, young adults and families through the What Works Fund.

Like other What Works Fund projects, we expect these to deliver evidence by the middle of 2018. The findings of these projects will feed into a wider review of the domestic and international evidence base of what works for financial education. As with our approach described in chapter 3 (see page 32), which includes consideration of interventions targeted at young adults, we will digest the results of

these and consider which we might be able to scale and extend, and which could attract funding from organisations other than the Money Advice Service.

Who can we influence?

The third stream of work that we intend to continue and enhance in 2018/19, and crystallise in the commissioning plan, is working with and through others. We have a high dependency on teachers, community groups, local authorities and a host of other organisations.

Our priorities in 2018/19 will be to:

- communicate to funders and providers the results of the What Works Fund;
- design a plan to communicate the benefits and business case for financial education to teachers. This is a long-term activity, especially in view of the fact that we won't know the results of Maths in Context until 2020;
- fund and co-ordinate the Scottish Financial Education Forum, which allows us to exchange evidence and ideas with a range of interested stakeholders; and more generally better understand the policies and priorities of the devolved administrations with regard to financial education;
- work with some exemplar local authorities who, as corporate parents and providers and commissioners of services for vulnerable children, young people, and families, want to improve the financial capability support they offer to children and young people for whom they have a statutory duty of care; and
- continue to fund the Financial Education Quality Mark, delivered with Young Money (formerly pfeg), which signals quality-assured financial education resources that have a clear theory of change and evaluation plan. This will include working to promote and expand use of the QM for resources in all UK nations and for vulnerable children and young people beyond purely school settings.

An invitation to co-fund

Our commissioning plan for children and young people will aim to co-ordinate the impact and effectiveness of multiple funders.

To make our plan as effective as possible, we are interested in entering into discussions with private sector foundations, corporate social responsibility arms of private businesses, and public sector funders / commissioners about how we can work together to improve the money management skills of a generation of children and young people.

If you would like to discuss these matters with us, please contact us at co-funding@moneyadvice.org.uk.

Funding versus influencing

At the heart of the commissioning plan we publish in autumn 2018 will be striking a difficult balance. We need to set out exactly what we think should be funded by the money guidance levy.

On the one hand, we expect that we will need to continue to generate evidence and business cases. These will be needed to persuade many organisations and bodies to make evidence-driven financial education for children and young people a priority. And to reach them we will have to invest in ongoing constant communication and engagement.

On the other hand, we believe that without tactical use of significant delivery funding, the rate of change across the sector will be too much too slow.

Given the scale of the challenge, we suggest that the funding for external commissioning (ie, funding flowing to external organisations for delivery) in the first three years covered by the commissioning plan should start in the very low millions, to prove that delivery at scale can have an impact.

Chapter 6: Measuring our impact

In this chapter we set out a developing framework of performance indicators that include the long-term, the medium-term, and indicators for 2018/19.

The long-term indicators are the Money Advice Service's view of how we can measure fundamental shifts in financial capability that are genuine outcomes for people in the UK population and therefore set strategic goals.

We have chosen six measures because we want the list to be short enough to provide strategic focus and for it to be easy to remember.

The six measures represent changes that it is quite impossible for the Money Advice Service or the SFGB to achieve on its own, but nonetheless a co-ordinating and delivery body can have a significant influence over. They can be achieved with the involvement of a very large number of partners in the Financial Capability Strategy for the UK, and over

the long term. However, they don't cover all age groups or parts of the population that the Financial Capability Strategy for the UK could cover. This is why the Financial Capability Board, alongside our Financial Capability Strategy Evaluators, are leading the development of further aims for the UK Strategy.

It is also possible that these measures will be affected by macroeconomic changes. However, we have picked them carefully to make them as immune as we can from this influence.

We will determine baseline figures for some of the six measures, and the amount of change that we think is achievable, during 2018/19. The flagship commissioning plans we will publish next year will play a crucial role in our thinking.

2018/19

2019–2022

Commitments, and measures of efficiency and effectiveness

Medium-term indicators of change

Aim 1: Delivering through others

1. We will review the progress to date of the Financial Capability Strategy for the UK and update it based on the latest evidence and plans.
2. We will share evidence about what works to improve people's financial capability by bringing together a wide range of evidence including everything learned from the What Works Fund, and publicise it through a nationally co-ordinated programme of communications to funders, practitioners and policy-makers.

Aim 2: Earlier and wider access to debt advice

3. We will ensure that 70% of peer assessments of our funded debt advice sessions are graded in the top two grades of the four-point quality scale.⁵
4. We will provide funding that will help at least 530,000 people access debt advice.
5. We will complete a tendering process for funding new debt advice agreements in London and the North-West of England embodying the six commissioning intentions of our debt commissioning strategy.
6. Across the whole debt advice sector, 90% of clients receiving debt advice will access it through organisations that use the Standard Financial Statement.

Aim 3: More people budgeting and saving

7. We will publish for consultation a commissioning plan focused on the needs of working-age people aged 18–54 primarily in the 'financially struggling' and 'financially squeezed' segments, to help them plan through active budgeting, managing credit and building savings.

Aim 4: Better access to guidance and advice

8. We will directly provide money guidance to 10.8m people, of which 3.9m will be from the 'financially struggling' and 'financially squeezed' segments.
9. We will maintain at or above 85% the percentage of customers who say they received the information they required when they used our telephone and digital services.⁶
10. We work with others in order for them to act on the evidence from the 'Right Place, Right Time' research, which highlights gaps in guidance.

Aim 5: Widening and improving financial education

11. We will consult on and publish a commissioning plan addressing the financial capability needs of children and young people at home, in school, and in community settings.

Corporate and transition commitments

12. We will establish the baselines for all the long-term impact measures, as well as setting a target for the amount of change we think is achievable; and we will propose the medium-term indicators of change.
13. We will reduce the ratio of MAS back-office costs to front-office delivery to below 9%:91%.
14. We will maintain staff engagement above 83%.
15. We will aim for staff turnover not to exceed one in five people up to the point of transition (bearing in mind a recognised industry norm is one in six).

We will propose medium-term indicators in 2018/19, particularly as part of our commissioning plans.

⁵ Everywhere in the UK except Scotland, where the nature of the debt advice we fund means that the peer review process is not applicable. Because we need to introduce changes to drive improvements in quality before we measure those improvements, the measurement period to fulfil the target of 70% will be between October 2018 and March 2019.

⁶ In the event that our telephone service undergoes a reprocurement, this KPI will only apply for the period when the full service is available.

2022–2025

Six long-term impact measures

<p>A. A rise in the percentage of 'financially struggling' and 'financially squeezed' working-age adults who access guidance and advice.</p>	<p>Why we think it is a valuable measure</p> <p>All our research points to confidence as a key building-block of financial capability but a confidence measure alone would not help us because some consumers are over-confident and others under-confident. Accessing guidance and advice builds financial confidence and also corrects financial over-confidence.</p>	<p>Limitations and considerations</p> <p>This includes access to debt advice. We could include the 'financially cushioned' in this measure but we think we should focus on those most in need. Although the measure does not include quality, we expect that one of our medium-term indicators of change would focus on improvements in the quality of guidance.</p>
<p>B. A rise in the percentage of adults who need debt advice that receive it.</p>	<p>Why we think it is a valuable measure</p> <p>Many people don't access debt advice until it's too late. This impact measure encourages all debt advice organisations to reach out earlier, and encourages MAS to consider overall questions of supply and demand.</p>	<p>Limitations and considerations</p> <p>More than 8m people are over-indebted but the number who we are certain <i>should</i> access debt advice is smaller. There are numerous ways of calculating this that point towards a figure of 2–3m people. We will agree on the best way of running the calculation as a baseline.</p>
<p>C. A fall in the percentage of people who, after receiving our funded debt advice, are still missing payments on their bills or credit commitments.</p>	<p>Why we think it is a valuable measure</p> <p>A key component of our measure for over-indebtedness is falling behind on bills or credit commitments. If people begin to be able to meet these, this means that the debt advice they have received has improved their financial equilibrium.</p>	<p>Limitations and considerations</p> <p>We recognise that this may prove challenging for some people, so the target can never be zero.</p>
<p>D. A fall in the proportion of 'financially struggling' and 'financially squeezed' adults who regularly use credit for everyday spending.</p>	<p>Why we think it is a valuable measure</p> <p>A number of different research reports point to management and planning of credit as a key financial capability.</p>	<p>Limitations and considerations</p> <p>This is a measure that will need careful planning to capture evidence from objective sources.</p>
<p>E. A rise in the percentage of 'financially struggling' and 'financially squeezed' adults who regularly put money into savings.</p>	<p>Why we think it is a valuable measure</p> <p>A consistent saving habit, no matter how small the amount, is a lead indicator for other important measures of financial capability. Some, but not all, of these people will acquire a savings buffer that will protect them from financial shocks.</p>	<p>Limitations and considerations</p> <p>We could include the 'financially cushioned' in this measure but we believe we should focus on those most in need.</p>
<p>F. A rise in the percentage of children and young people who receive a meaningful financial education.</p>	<p>Why we think it is a valuable measure</p> <p>It is consistent with the currently agreed goal of the Children and Young People stakeholders working on the UK Strategy.</p>	<p>Limitations and considerations</p> <p>We will measure this as follows: it will be the percentage of children and young people who, in our financial capability survey, receive regular money, have parents who set rules about money, and whose parents give responsibility for spending decisions – or have received financial education in school that they found useful.</p>

Chapter 7: Our budget and resources in 2018/19

This chapter provides a breakdown of the total Money Advice Service budget for 2018/19, and a comparison against the 2017/18 budget. Our money guidance and debt advice are funded by separate levies on the financial services industry; we therefore prepare separate budgets for each.

	2017/18	2018/19	2018/19 variance
Money Guidance budget	£27m	£27.2m	+£0.2m
Debt Advice budget	£48m	£56.3m	+£8.3m
Total Money Advice Service budget	£75m	£83.5m*	+£8.5m*

**of which £0.5m are one-off costs for transition to the single financial guidance body. For our approach to transition, see page 54 below.*

Money Guidance budget	2017/18	2018/19	2018/19	Central costs & overheads (£000)	For aim 2, see Debt Advice budget overleaf

MAS corporate services

Corporate services is a diverse group of teams and people united by a common goal to support MAS in achieving its objectives by providing quality, consistent and compliant information and services. The breadth of service delivery covers people, process and infrastructure. While some of the corporate services activities are governed by legal and regulatory frameworks the team also supports organisational initiatives both planned and as they emerge. Key initiatives for next year include:

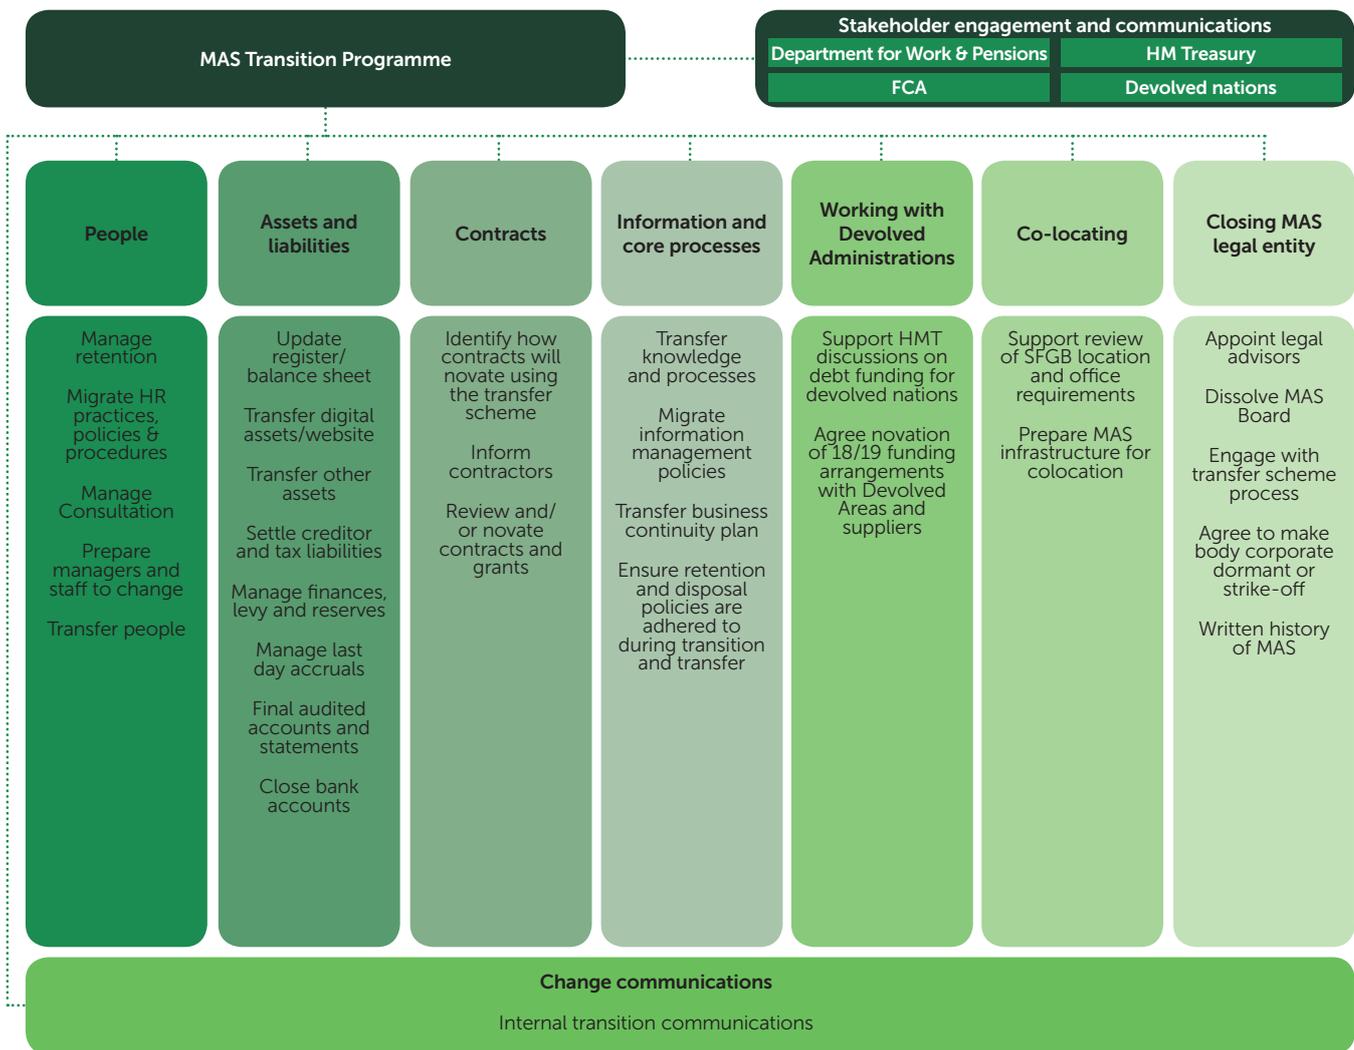

- **People focus:** we will enhance our leadership capability through our ongoing Leadership Programme; strengthen line management skills through a new Line Manager Training Programme; and embed a strong performance management culture by providing training, guidance and tools for people managers and staff to draw upon. We also plan to continue our staff engagement by making MAS 'a great place to work'.
- **Process focus:** we will continuously improve what we do. Enhancing our service delivery is based upon understanding what we do and recognising opportunities to fine-tune the way that we work together. Key areas for progress in 2018/19 will be refining our core process mapping and supporting all areas within MAS to do the same. Our relaunched knowledge management programme trialled in corporate services will be embedded within MAS to leverage the organisational knowledge ready for transfer to the single financial guidance body (SFGB).
- **Efficiency and effectiveness focus:** our continuous improvement ethos challenges us to examine how we deliver better, more cost-effective services to our internal customers. We will introduce metrics that will help measure what we are delivering, our areas for improvement and what to expect from us. A strong value for money ethos is the underlying theme. We will continue our focus working internally with departments and externally with suppliers to maximise the value we obtain from our human and financial resources. Programme and resource planning initiatives introduced this year will be embedded in the approach MAS takes to strategic and operational planning.
- **Legal and regulatory focus:** corporate service activities are designed to safeguard our staff, MAS and our stakeholders by making sure we adhere to legal requirements. We will continue to move forward with data management improvements and General Data Protection Regulation compliance. Our commercial team will build upon our commissioning and contractor management approaches. The governance team is actively involved in supporting business-as-usual activities as well as preparing for the changes needed for the SFGB. The Public Sector Equality Duty will continue to be supported by our human resources and programme support team to ensure deeper and wider adoption by the business at large and in our business partners.

Transition to the SFGB

In autumn 2018, subject to parliamentary process, we expect the statutory functions of MAS will be transferred to the single financial guidance body, along with The Pensions Advisory Service and Pension Wise. Based on our current assumptions (which could change as we receive more information as a result of the parliamentary process) MAS has made provision of £0.5m to fund transition projects and professional and legal fees to support the transfer of staff, information, knowledge, processes, assets and liabilities, as well as closing MAS as a legal entity.

Our transition programme structure is given in the diagram below.

MAS Transition Programme Structure

Annex A: Responses to our consultation

Between 20 December and 5 February we published a public consultation on the draft version of this business plan. We received 26 responses from a diverse range of public, private and voluntary sector stakeholders, which are analysed below. We are very grateful to the many organisations who offered suggestions, evidence and constructive challenge throughout the business plan drafting process. As is always the case, some features of our plan attracted both critical comments and praise, and in this summary we aim to give a view of where the consensus lay.

In summary, the responses have given us real confidence that our broad strategic approach and direction is right, and that stakeholders are supportive and with us. The responses have also caused us to reflect on particular areas of the plan and make changes that we believe make it substantively better.

Statutory consultees

The law requires us to consult with the Practitioner Panels and Consumer Panel that support and advise the FCA; HM Treasury; and the Department for Business, Enterprise and Industrial Strategy. We fulfilled these obligations and received useful input from statutory consultees.

Informal consultation

As is our usual practice, over the course of developing the plan we consulted with more than 20 organisations through one-on-one meetings.

The formal consultation process

We received 26 responses. Six were from public sector organisations, eight from organisations representing the private sector, and 12 from the voluntary sector. We were delighted with the range and strength of the supportive comments we received on our final business plan, delivering the last year of our three year strategy.

Continuing our Corporate Strategy

The opening section of our plan restated our Corporate Strategy, and set out why we thought it was relevant to complete the third year of that strategy as a way of providing insight and momentum to the work of the single financial guidance body (SFGB).

Stakeholders agreed with this approach. They saw all the main themes of the Corporate Strategy as relevant to the expected remit of the SFGB. Where they commented on the Corporate Strategy, typically they wanted to see impact at scale sooner, and counselled against putting too much emphasis on the What Works Fund to solve fundamental

challenges with financial capability.

We agree that although the What Works Fund is probably one of the largest of its kind focusing on financial capability anywhere in the world, even the evidence from its 60+ projects will have significant limits. When we publish the commissioning plans for children and young people, and to help working-age people to budget and save, we will ensure that they are based on evidence reviews that incorporate 'what works' from our own fund, but also a systematic review of evidence from other important sources. These sources will look at evidence from the UK and other countries, especially evidence that IMPACT principles signatories have placed on our Evidence Hub.

Aim 1: Delivering through others

Stakeholders thought the decision to update and simplify the Financial Capability Strategy for the UK was timely and welcome. A typical comment was *'we applaud the decision to refresh the document and to publish a short document and hope both of these will really focus on delivery.'*

The Evidence Hub was particularly commented on as a valuable component of the UK Strategy that should continue to be a prominent feature of the SFGB's work.

Stakeholders commenting on the work to develop the skills and professional competence of practitioners welcomed that programme of work, but cautioned against several pitfalls, including the risk that it could become a box-ticking exercise.

There was a welcome wave of support and encouragement from financial services providers who requested that MAS be explicit about how they can be involved in supporting and delivering financial capability goals.

We have updated our plans accordingly, to conduct a consultation and mapping exercise among financial services firms active in improving their customers' financial capability, and before the end of 2018 we will publish a position paper that highlights the good practice we have found. It will set out how we think MAS can accelerate, enhance and widen the good work already being done.

Aim 2: Earlier and wider access to debt advice

Responses to this section of our plan understandably crossed over with early responses to Peter Wyman's Independent Review of Debt Advice Funding, which was published on 25 January 2018. Because the Review was independent, we did not have access to Peter Wyman's conclusions and recommendations when we formulated the consultation version of our plan. But many of the themes of the Wyman Review took up matters we have already been working on, so we received valuable input from consultees on these.

Most consultees agreed with the analysis we set out of issues in debt advice quality. For example, one respondent commented: *'The focus on quality is very important to us and we agree that the questions outlined [on page 30] must be comprehensively answered [...] to ensure complete confidence in our advice.'*

The main concerns from respondents in relation to our debt advice work were threefold:

- that the Wyman recommendations weren't in the plan and need to be advanced as quickly as possible;
- that there were too many ambitions and too much going on in debt advice to be achieved in a year of transition; or
- that the strategic direction was unclear.

On the last point, we believe that if it was true before, the Peter Wyman Review has laid it to rest. We will encourage the Debt Advice Steering Group, which is formulating an outline Debt Advice Sector Strategy, to update it in a way that incorporates all the key messages of the Peter Wyman Review, in Spring 2018. We think this will set out the strategy for the debt advice sector with both urgency and clarity.

The first two concerns set out above are somewhat in tension with each other. But we recognise that our debt work is an ambitious programme, and we have reflected on the concerns expressed. As a result we have prioritised the handful of key strategic changes that we think will have the most impact in 2018/19, recognising that capacity will be needed both in MAS, and from across the debt advice sector. We welcome the additional £8m of funding approved by the FCA which will create more capacity in the sector.

Aim 3: More people budgeting and saving

This strategic aim continues to attract controversy from some stakeholders, and strong support from others. On the whole, it is highly supported. One respondent even urged us to launch a high-profile mass-market savings campaign in 2018/19.

Respondents who disagreed with the work in this chapter had a variety of reasons for doing so:

- Two respondents reflected that there was little in the plan about our work for older people in retirement. We acknowledge this and have now set out our work and strategic thinking around older people in more detail on page 33.
- Some respondents felt there was a lack of clarity about how people in financial difficulty could be supported to budget and save through early engagement with debt advice agencies. Doing this is critical, and we will clarify this in both the commissioning plan we publish under this aim, and in the commissioning plans for our debt advice work.
- There were more fundamental objections to saving as a goal, alongside comments that the macroeconomic environment will always outpace any financial capability improvements. We agree with these points of view, but we believe that the evidence from the Financial Capability Survey and other sources clearly shows that a regular savings habit – however small the amount saved – is a vital lead indicator for many other positive outcomes in financial capability. So we see it as fundamentally important.

Aim 4: Better access to guidance and advice

This strategic aim attracted positive comments. We note the concerns expressed by some respondents that, to the extent that we are successful in getting people to take up guidance on a broader range of life events, face-to-face services could become too stretched. We therefore think that self-service guidance, especially digital, is key.

Aim 5: Widening and improving financial education

This strategic aim also attracted positive comments, and where respondents had more to say it was typically a call to be more ambitious. We see the long-term impact measure F (see page 49 above) as a strong statement of that ambition.

Commitments and long-term impact measures

We are grateful for all the respondents who took trouble to contribute to the positive and informed debate about these measures.

All respondents welcomed the principle of the measures, and most, where they disagreed, only disagreed on one or two. As one respondent commented: *'It is better to fail to achieve key measures [...] for reasons beyond MAS's control [...] than to focus on activity measures that can be achieved with some confidence, but may not appreciably change the nation's saving and debt problem.'*

The technical comments were many and detailed.

For measures A, B and D and E, while there were some important comments in the detail, broadly respondents were supportive of these measures. We have reflected further on measure D and we believe we have improved the wording to better capture the spirit of the intended outcome.

The most controversial proposed measure was measure C, which would aim to reduce repeat use of debt advice. We had stated our view that for many people, returning to debt advice will be a good thing, but respondents persuaded us that the fraction for whom repeat use of debt advice can be avoided is too small to justify this measure. As a response, we have proposed a different measure in this final version of the plan that we believe makes a strong link between good debt advice and financial capability.

The other measure that attracted controversy was measure F. The criticism was not of the principle of proposing that children and young people should get a good financial education. It focused on the challenge of measuring it. As a response, in this version of the plan we have changed the wording. We have also set out our thoughts about how meaningful financial education can be measured.

An invitation to co-fund

We are interested in entering into discussions with private foundations, corporate social responsibility arms of private businesses, and public sector funders about how we can work together to improve the money management skills of a generation of children and young people, and working-age people.

If you would like to discuss this with us, simply contact us on co-funding@moneyadvice.org.uk
